

AQUARIS SILENT

Fan coil unit

OPERATING CONDITIONS

- Coolant or heating fluid: water / water-glycol mixture
- Maximum operating pressure of the register: 8 bar
- Maximum air outlet temperature: 40 °C
- Maximum relative humidity in the environment: 60%
- Power supply: 230 V AC 50 Hz
- Control voltage: 0-10 V DC signal

PERFORMANCE DATA

	Size =	1	2	3	4	5	
	V _L =	675	999	1068	2352	2376	m ³ /h
	p _s =	112	91	91	152	152	Pa
	L _{WA} =	60	56	58	68	70	dB(A)
	W =	53	51	56	240	235	W
	Q =	3.2	4.3	5.0	6.6	7.3	kW
	Q =	3.5	4.3	4.9	5.6	6.1	kW
	Q _S =	2.7	3.7	4.1	5.6	6.1	kW

Heating: t_{w1} = 65 °C, t_{w2} = 55 °C, t_R = 20 °C

Cooling: t_{w1} = 7 °C, t_{w2} = 12 °C, t_R = 27 °C, HR = 47 %

Maximum values of the device according to (EU) 2016/2281 for 4-pipe design and air filter ISO Coarse < 40%.

ADVANTAGES

- Flexible mounting and installation possibilities
- High cooling and heating capacities
- Control technology adapted to any demand
- Low noise generation or reduced sound pressure
- Energy-efficient, decentralised air-conditioning
- Solid compact design
- Easy mounting and maintenance
- Attractive appearance (device with housing)
- EC motors with highest efficiency and continuous control 0-10 V

INTENDED USE

For decentralised conditioning of room air in compliance with Commission Regulation (EU) 2016/2281 of 30 November 2016.

GENERAL DESCRIPTION

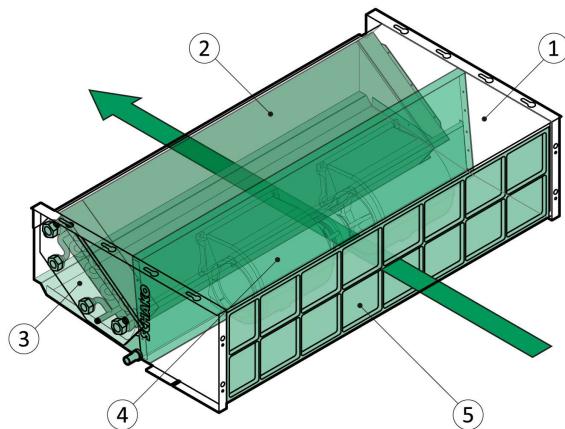

The fan convectors Aquaris Silent are especially designed for decentralised air treatment (offices, sales rooms, hotels, etc.).

The new generation of fan convectors with EC fans is also significantly more energy-efficient, easier to install and also easier to maintain.

Based on the ambition to provide maximum adaptation to the architectural situation of the room to be air conditioned, the fan convectors are produced in different models – ranging from devices to be installed in false ceilings or floors (horizontal model) to devices for visible mounting with device casing (vertical and horizontal models).

OPERATION

The secondary air to be treated is taken in by the fan (4), filtered in the filter section (5) and conditioned in the heat exchanger (2).

DEVICE DESCRIPTION

1 Housing

The housing of the device consists of profiles and covers made of galvanised sheet steel with a 6 mm thick and oxygen diffusion-tight insulation.

2 Heat exchanger

The heat exchanger unit can consist of a single register with 3 pipe rows for cooling or heating operation (for connection to a 2-pipe system), only 1 pipe register for heating (for connection to a 2-pipe system) or of two registers with 3 and 1 pipe rows (for connection to a 4-pipe system). The registers have been designed for operation with water or with a water-glycol mixture.

The registers consist of copper pipes, aluminium ribs, a manual ventilation and drainage system as well as a frame made of galvanised sheet steel.

The length of the register depends on the required performance (size of the device). The water connections can be attached to the register either on the left- or right-hand side.

3 Condensate pan

The condensate pan can be mounted horizontally or vertically and is used for collecting the condensation water below the cooling register.

The condensate pan is made of stainless steel sheet in accordance with VDI 6022 and has a thermal insulation (polyethylene with a thickness of 6 mm) to prevent the formation of condensation water.

The condensation water drain is located on the same side as the hydraulic connections and can be connected to the on-site drain system.

4 Motorised fan

The highly efficient fan with EC motor consists of double-sided, intake-operated, dynamically balanced centrifugal blowers with forward directed blades and direct drive. With a maintenance-free ball bearing for a long service life.

The EC fan can be activated by 0-10 V and is infinitely variable. The fan group of each device size has been selected for the highest possible static pressure at a low sound power level.

5 Filter

The standard filter is reusable and consists of synthetic filter medium in a plastic frame. Classification ISO Coarse < 40% according to ISO 16890.

Thanks to the holding clips, the filters can be dismounted without using tools.

OPTIONS

- Flange ⑥
- Electric connection position left or right ⑪
- Hydraulic connection position left or right ⑫
- With offset electrical connection box
- Additional control and regulation elements
- Additional condensate pan for valves ⑬
- Hydraulic regulation mounted ex works ⑭
- Attached condensate pump ⑮

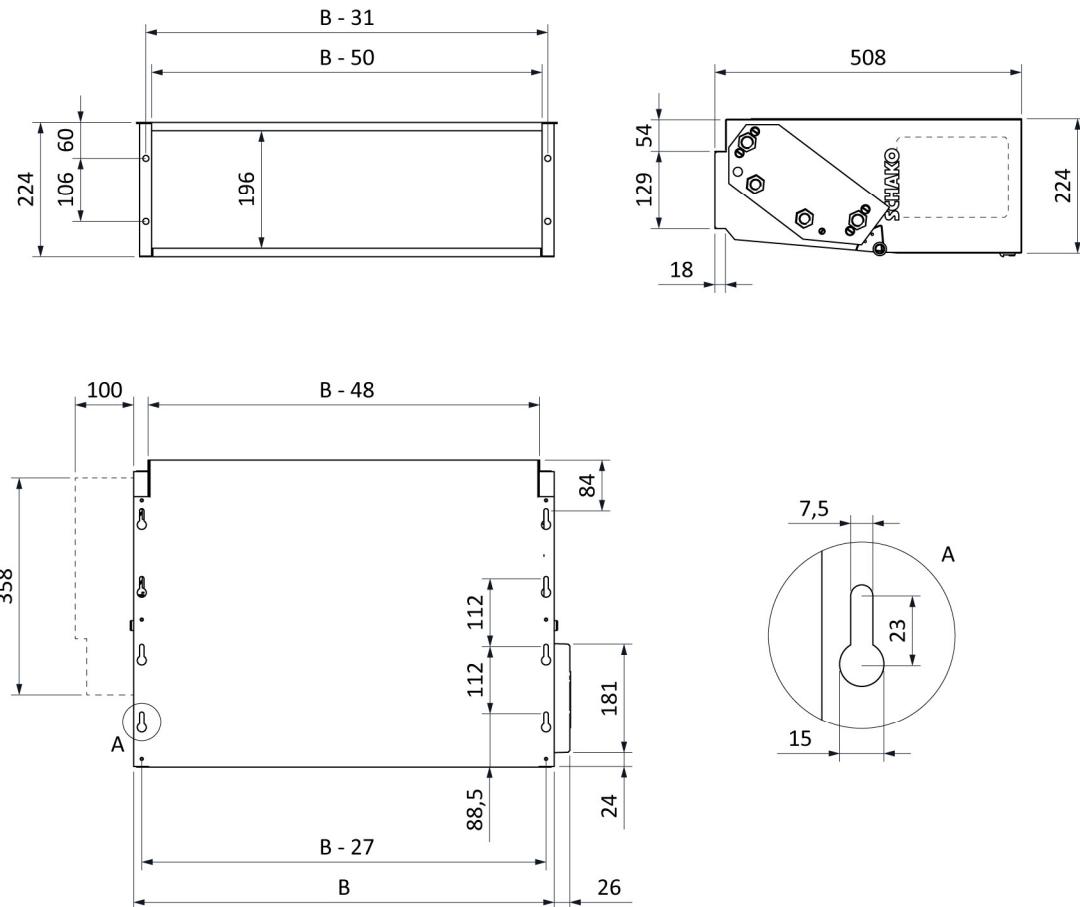

ACCESSORIES SUPPLIED LOOSE

- Flexible connection ⑦
- Frame for mineral/glass wool air duct
- Plenum box for supply air ⑧ and return air ⑨ with spigot ⑩
- Transition piece with air diffuser
- Device casing
- Flexible hydraulic connection
- Combination control valves and actuators
- Room thermostat

MODELS, DIMENSIONS AND WEIGHTS

Available in 5 sizes with 1 fan (size 1), 2 fans (sizes 2 and 3) or 3 fans (sizes 4 and 5).

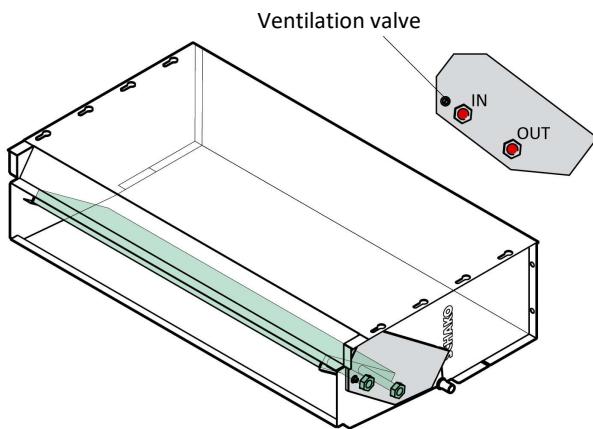

Size	Dimensions B (mm)	Weight (kg) Base unit	Water capacity of the registers (l)	
			3 rows of pipes	1 duct row
1	697	14	1.2	0.3
2	912	20	1.6	0.4
3	1247	25	2.3	0.6
4	1352	32	2.5	0.7
5	1597	35	3.0	0.9

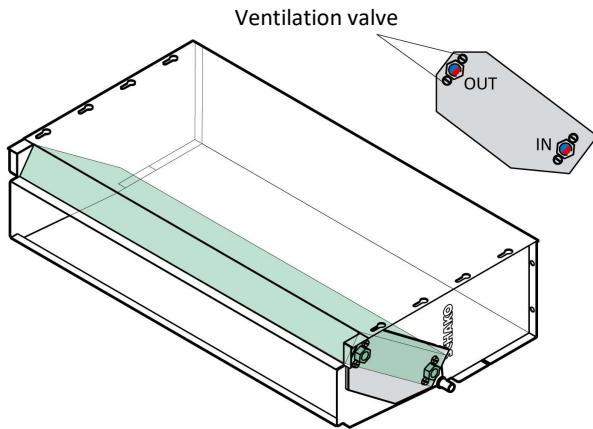

HEAT EXCHANGER

The device can be ordered with 1 register for a 2-pipe system or with 2 registers for a 4-pipe system.

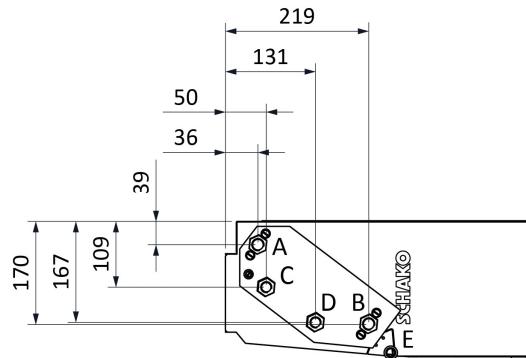

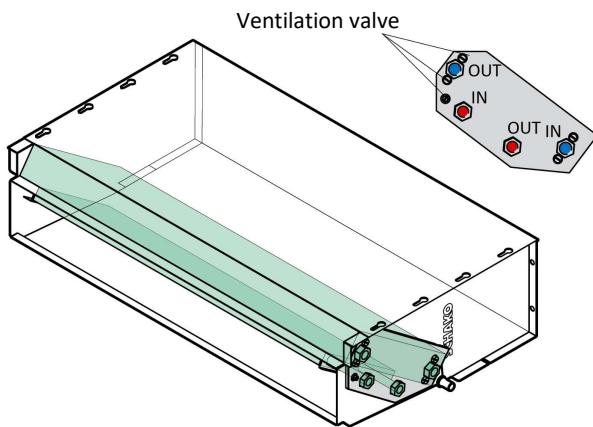

R1 = 2-pipe register 1 pipe row
 (heating)

R3 = 2-pipe register 3 pipe rows
 (cooling or heating)

L4 = 4-pipe register 3 and 1 pipe rows
 (heating and cooling)

NOTE

Register thread: cylindrical internal thread Rp 1/2 according to EN 10226 standard:

● C = Heating water inlet
 ● D = Heating water outlet

● A = Cooling water outlet
 ● B = Cooling water inlet

● E = Condensate drain ø16 mm (external)

NOTE

To prevent deposits and corrosion, the quality of the water for filling the registers must comply with the VDI 2035 regulations.

NOTE

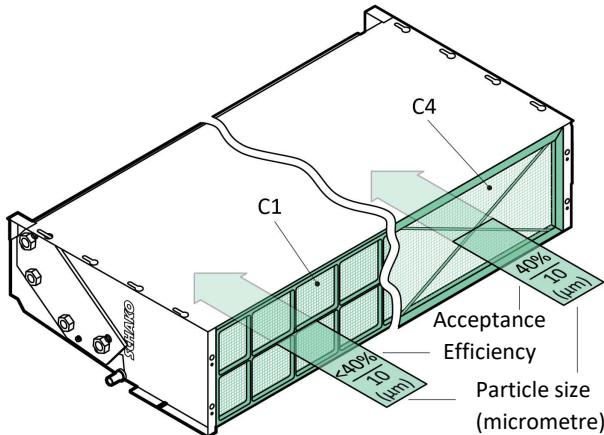

The registers are equipped ex works with a manual bleed valve. Use the air vents always in top position Before filling the system, check all air vents for tight fit.

AIR FILTER

The standard filter consists of synthetic fleece on a plastic frame with a filter efficiency ISO Coarse < 40%. Optionally, a synthetic fleece filter in a sheet steel frame with a filter efficiency ISO Coarse 40% can be ordered.

C1 = ISO Coarse < 40% (standard)

C4 = ISO Coarse 40%

MOUNTING

There are models for horizontal installation in ceilings and floor as well as for vertical installation on the wall.

H = Horizontal – ceiling (standard)

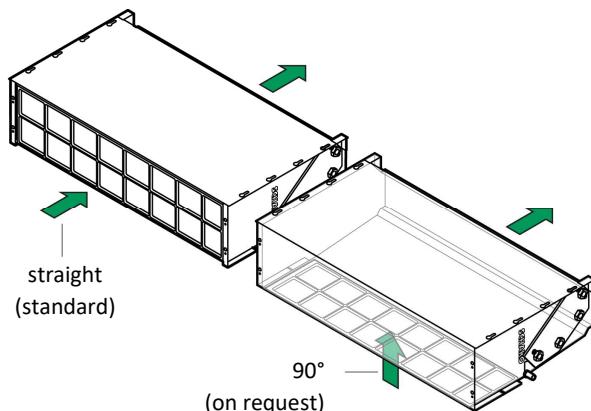

B = Horizontal – floor (not compatible with device casting GV)

V = Vertical – wall

EXTRACTION POSITION

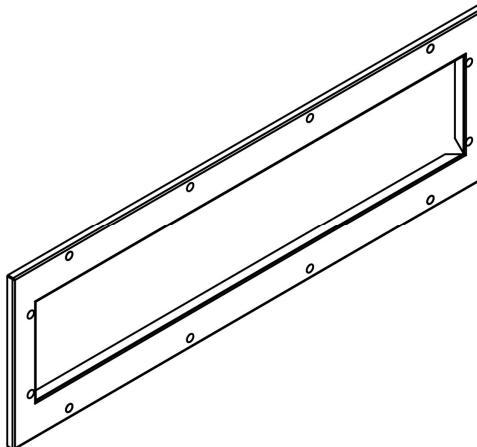

The extraction moves in the same direction as the supply air and is located at the rear of the device. Other models can be ordered.

1 = Secondary air intake, straight

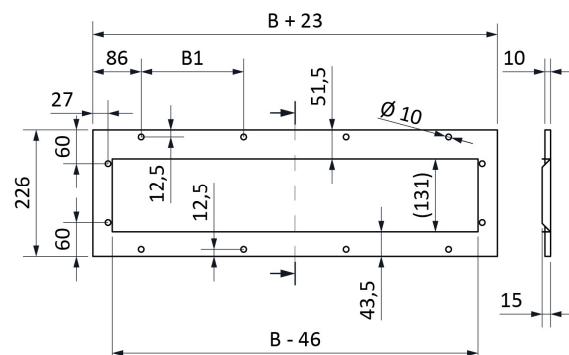

FLANGE

The flange is made of sheet steel with perforations, for connecting the device to the plenum box and connection accessories.

F0 = without flange (standard)

FZ = with supply air flange

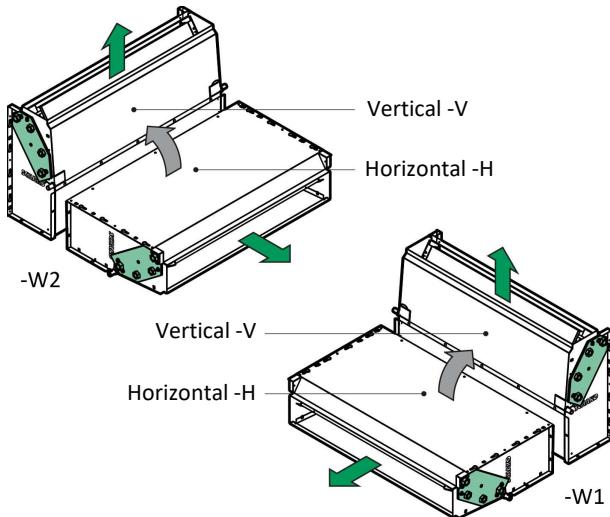

Size	B (mm)	B1 (mm)	bore	Weight (kg)
1	697	548	8	0.88
2	912	382	10	1.11
3	1247	549	10	1.48
4	1352	401	12	1.59
5	1597	483	12	1.86

B = Device width (see page 5)

WATER CONNECTION

The hydraulic connection can be made on both sides of the device.

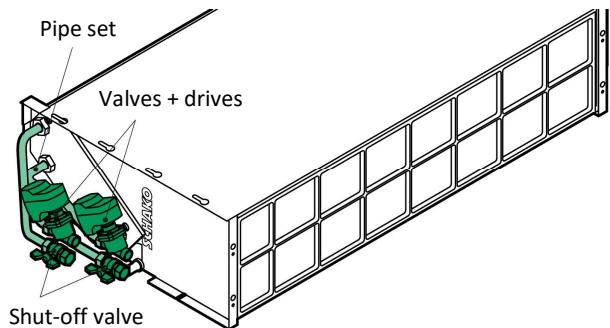

W1 = in air flow direction on the left (not possible for electrical connection position -S1) (standard)

W2 = in air flow direction on the right (not possible for electrical connection position -S2)

MOUNTING OF HYDRAULIC REGULATION

The valves and drives for hydraulic regulation can be ordered as already installed or supplied loose for installation on site. The valve and the actuators can be adjusted on site without tools.

00 = without valves, without drives, without pipe set, without shut-off valves (standard)

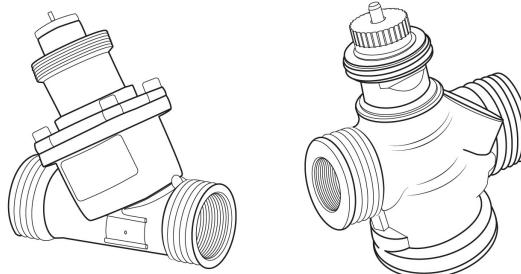

xx = with valves, drives, pipe sets and shut-off valves mounted ex works (not compatible with valves with connection $\geq 1"$)

NOTE

All accessories can be ordered separately by specifying -00 and ordering them with their own code (see Order code for accessories supplied loose).

Pressure independent control valves

Valves with pressure-independent flow control and automatic compensation function. For water-side control and automatic hydraulic adjustment of air after-treatment devices for heating and cooling.

--- Control and compensation in one valve.

--- Presetting range with linear valve characteristics.

--- Can be fitted with electrothermal or electromotive actuators.

--- PN 25.

--- Water temperature from 1 °C to 100 °C.

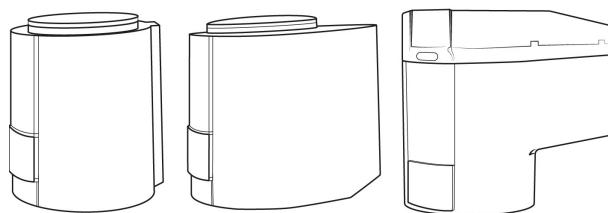

--- Ambient temperature from 1 °C to 50 °C.

--- Operating differential pressure up to 600 kPa.

--- For application in closed circuits.

Actuators

Actuators for the operation of control valves in heating and cooling systems.

--- Compact construction, small dimensions.

--- "Snap-on" installation without tools.

--- Suitable valve adapters for 99% of all valves worldwide.

--- Low power consumption (1 W).

--- Silent and maintenance-free.

--- Fast response time.

--- 360° mounting position.

--- Patented 100% protection for leaking valves IP54.

--- Certified according to TÜV and NRTL.

--- Housing colour signal white RAL 9003.

--- In the variants with valve travel detection, the valve travel is automatically detected for optimum use of the active control voltage range.

Selection

The volumetric flow [l/h] can be found in the technical documentation or in the SCHAKO design program. Selection of the optimum valve: the valve must be operated at approx. 80% of its $V_{W,\max}$.

Valves	Model	DN	Connection (inch)	Pressure measurement points	Stroke (mm)	$V_{W,\min}$ (l/h)	$V_{W,\max}$ (l/h)
01	VPP46.10L0.2	10	G 1/2	No	2.5	30	200
02	VPP46.10L0.4	10	G 1/2	No	4.5	65	333
					5.0	65	370
03	VPP46.15L0.2	15	G 3/4	No	2.5	30	200
04	VPP46.15L0.6	15	G 3/4	No	2.5	100	575
05	VPP46.20F1.4	20	G 1	No	4.5	200	1190
					5.0	220	1330
25	AB-QM-003Z8221	15	G 3/4 A	No	4.0	65	650
26	AB-QM-003Z8220	15 LF	G 3/4 A	No	4.0	20	200
27	AB-QM-003Z8222	15 HF	G 3/4 A	No	4.0	120	1200
31	AB-QM-003Z8223	20	G 1 A	No	4.0	110	1100

Maximum allowed differential pressure = 600 kPa | G = Male thread | DN = Nominal width | V_w = Water volumetric flow |

LF = LowFlow version | HF = HighFlow version

NOTE

Valves $\geq 1"$ are supplied loose and without screw connections.

NOTE

The device is preset ex works to the maximum flow unless otherwise specified.

NOTE

If the valve kit is installed without an additional condensate pan, the connection pipes and valves must be thermally insulated.

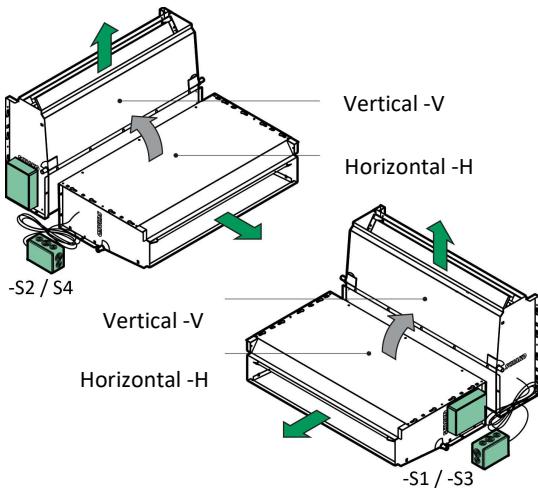

Drives	Model	Type	Actuator signal	VWE	FS	Operating voltage	Direction of action	Travel distance (mm)	Running time	Actuating power (N)
T01	SAST127474	T	ON/OFF	-	-	230 V AC	NC	5.0	≈ 4 min	100
T02	SAST127475	T	ON/OFF	-	-	24 V AC/DC	NC	5.0	≈ 4 min	100

M03	SAPO129150	T	0-10 V	✓	✓	24 V AC/DC	NC	6.5	≈ 5 min	125

T = Thermal | M = Motorised | NC = Normally closed

VWE = Valve travel detection | FS = Feedback signal

POSITION OF ELECTRICAL CONNECTION

The electrical connection can be made on the right or left. To place the electrical connection on the same side as the hydraulic connection, the option with offset electrical connection box with 1.5 m cable must be ordered.

- S1** = in air flow direction on the left (not possible for water connection position -W1)
- S2** = in air flow direction on the right (not possible for water connection position -W2) (standard)
- S3** = with offset electrical connection box in air flow direction on the left 1.5 m (not possible for combination of vertical mounting -V and water connection position -W1)
- S4** = with offset electrical connection box in air flow direction on the right 1.5 m (not possible for combination of vertical mounting -V and water connection position -W2)

ADDITIONAL CONTROL AND REGULATION ELEMENTS

A fault message output can be selected as an option. If the fan convector stops due to a fault, the temperature control receives an alarm signal from the device. One temperature control RDG160T can control up to 3 fan convectors with alarm display.

On the other hand, the EC interface enables the fan convector to be controlled via analogue 3-stage controllers. This allows older devices to be directly replaced by the new high-efficiency EC devices without the need for any changes to the control.

These elements are located in additional electrical boxes. Further information on the connection can be found on pages 29 and 30.

- 0** = without additional control and regulation elements
- 1** = with fault message output
- 2** = with EC interface for 3-stage controller

AQS-EC-1-R3-C1-H-1-F0-W1-00-00-000-S2-0-K0-0

Construction subject to change.

No return possible.

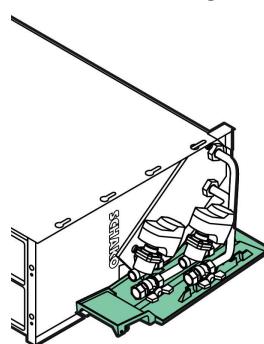

CONDENSATE DRAIN

ADDITIONAL VALVE CONDENSATE PAN

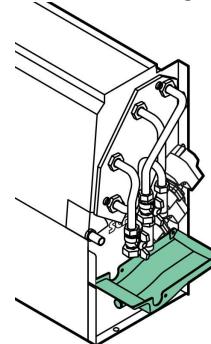

The additional condensate pan is made of plastic and is suitable for the horizontal and the vertical version. The condensate pan collects the possible condensate produced in the valve kit and removes the formed condensate water from the cooling register. The valve condensate pan is installed on the side of the hydraulic connection.

- K0** = without valve condensate pan (standard)
- KH** = with valve condensate pan on the side of the hydraulic connection

Horizontal mounting

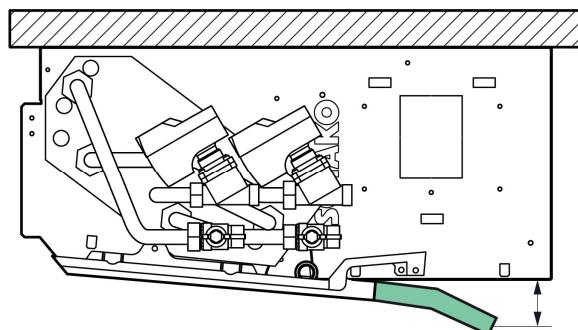

Vertical mounting

ATTENTION

The condensate water should be drained below the lowest level of the fan convector. The valve condensate pan must not be used by third-party systems.

Connection diameter 16 mm (inside)

NOTE

If the valve kit is installed without an additional condensate pan, the connection pipes and valves must be thermally insulated.

CONDENSATE PUMP

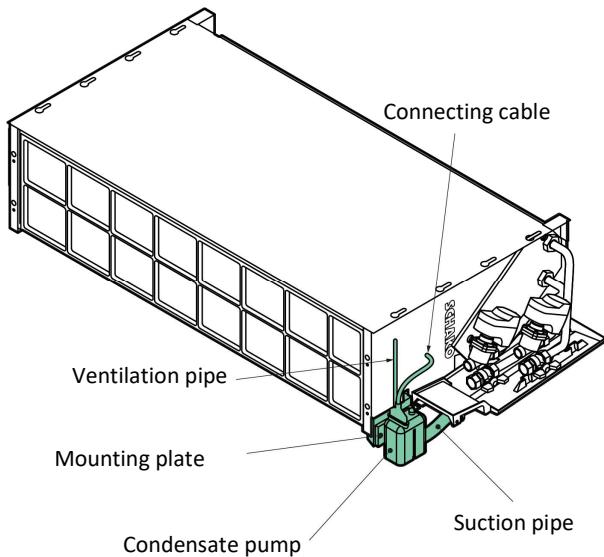

The installation of a condensate pump allows the condensate water produced to be drained when the level of the waste water duct is higher than the level of the condensate water drain. The condensate pump is fastened to the housing by means of a vibration-reducing rubber plate.

The condensate pump is equipped with a potential-free fault message contact NC with a max. switching power of 8 A/250 V resistive load.

ATTENTION

To avoid any risk of condensate overflow, it is mandatory to connect the contact for safety function.

- 0** = without condensate pump (standard)
- 1** = with condensate pump Si-10, mounted ex works

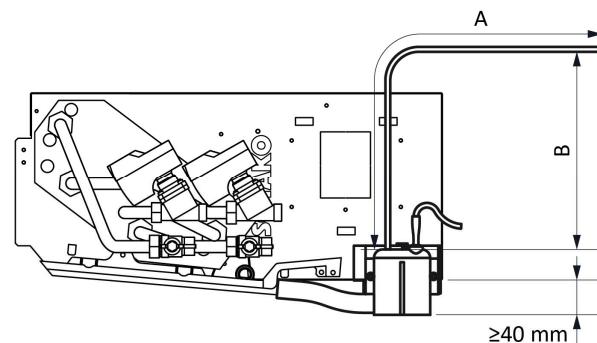

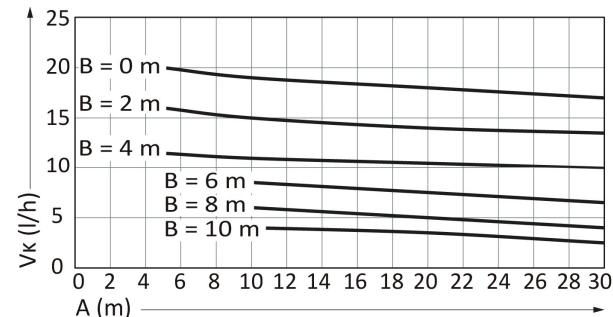

Model	Si-10
Maximum volumetric flow	20 l/h
Maximum delivery height	10 m
Maximum pressure	14 m
Sound level at 1 m	$\leq 28 \text{ dB(A)}$
Power supply	230 V AC - 50/60 Hz - 14 W
Float switch	ON: 18 mm OFF: 12 mm ALARM: 21 mm
Safety contact	NC 8 A resistive load 250 V
Thermal protection	115 °C (automatic restart)
Operating cycle	100% continuous
Protection	IP54
Dimensions	43.5 x 66 x 77 mm

Aquaris Silent – Fan coil unit TECHNICAL DOCUMENTATION

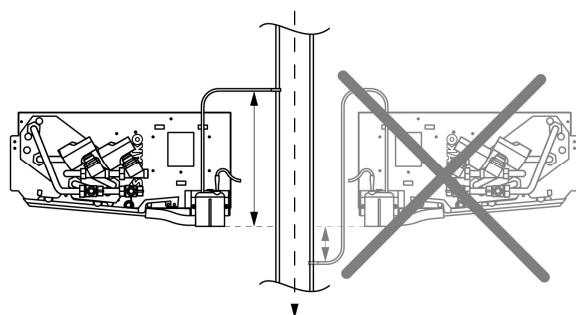

Condensate drain

Functional diagrams

ATTENTION

The drain must be located above the level of the condensate outlet.

ATTENTION

If the condensate pump is not used for a longer period of time, it is recommended to seal the drain of the pan to prevent the penetration of dirt.

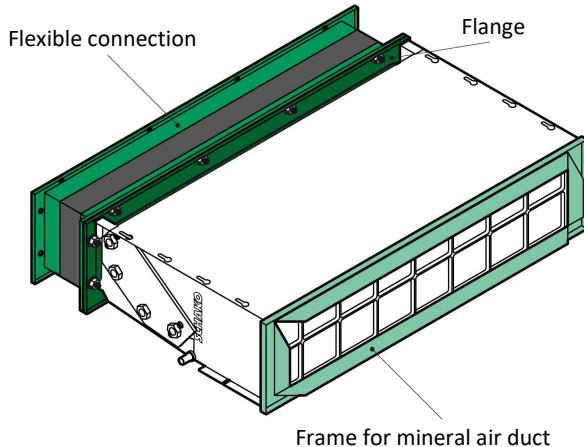

ATTENTION

Before commissioning, check the correct functioning and drainage of the condensate water by slowly pouring in approx. 0.5 l of water.

DUCT CONNECTION

NOTE

All connection parts except for the flange are supplied loose for installation on site.

FRAME FOR MINERAL/GLASS WOOL AIR DUCT

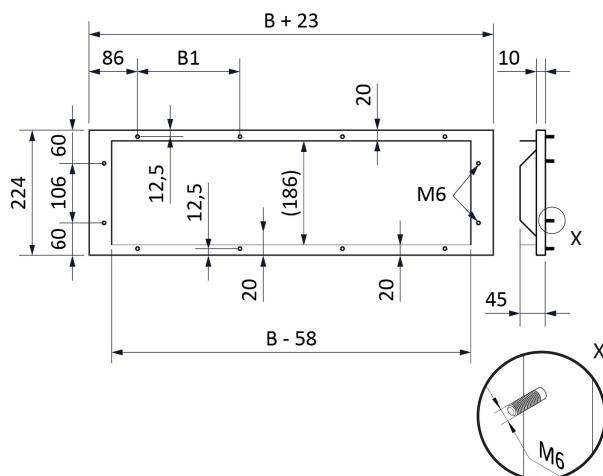

This frame facilitates installation and filter removal in systems with ventilation ducts made of mineral wool or glass fibre.

Z = for supply air

A = for return air

NOTE

The frame for mineral air duct for supply air is only required for installation of the flexible connection in supply air.

Size	B (mm)	B1 (mm)	Inserts (pc)	Weight (kg)
1	697	548	8	1.48
2	912	382	10	1.86
3	1247	549	10	2.45
4	1352	401	12	2.64
5	1597	483	12	3.07

B = Device width (see page 5)

Aquaris Silent – Fan coil unit TECHNICAL DOCUMENTATION

Duct connection

FLEXIBLE CONNECTION

Accessories to prevent transmission of vibrations between the device and air ducts or acoustic boxes. Available in lengths of 150 mm and 290 mm.

NOTE

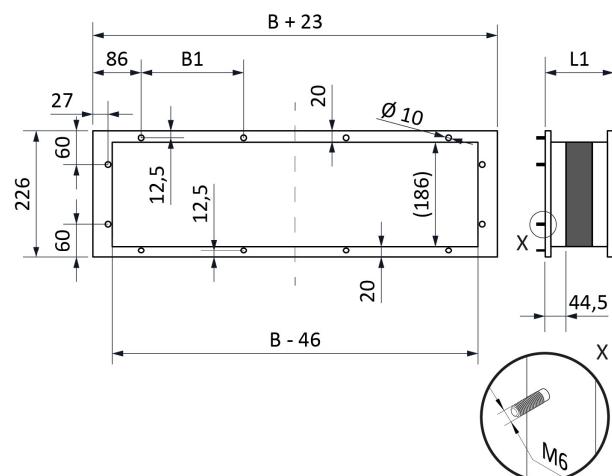

To attach the flexible connection for supply air, the fan convector requires a flange.

Z1 = 150 mm for supply air

Z2 = 290 mm for supply air

A1 = 150 mm for return air

A2 = 290 mm for return air

Size	B (mm)	B1 (mm)	L1 (mm)	Inserts (pc)	Weight (kg)
1	697	548	150/290	8	1.90
2	912	382		10	2.38
3	1247	549		10	3.13
4	1352	401		12	3.36
5	1597	483		12	3.91

B = Device width (see page 5)

ATTENTION

In case of operating conditions with increased humidity and air temperatures below the dew point, connection fittings and flexible connections on the supply air side must be insulated from the outside after installation on site.

EXAMPLES OF CONNECTIONS TO DUCTS

	without flexible connection	with flexible connection
Mineral/glass wool air duct	Frame for mineral/glass wool air duct	Frame for mineral/glass wool air duct Flange Flexible connection
Plenum box	Flange	Flange Flexible connection
Supply air via mineral/glass wool air duct, free intake		Frame for mineral/glass wool air duct Flange Flexible connection
Supply air via plenum box, free intake	Flange	Flange Flexible connection
Supply air via plenum box, extraction via mineral air duct	Frame for mineral/glass wool air duct Flange	Frame for mineral/glass wool air duct Flange Flexible connection

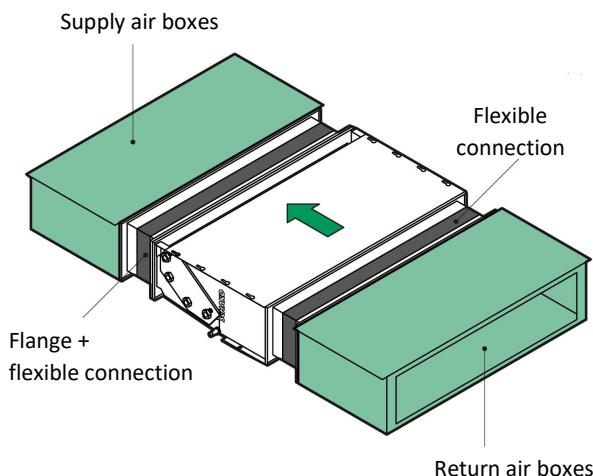

SUPPLY AIR AND RETURN AIR BOXES

NOTE

Plenum boxes are ordered and supplied separately.

The plenum boxes are made of galvanised sheet steel and can be ordered with several connection versions and lengths from 200 mm to 1100 mm.

The flange should be selected for the connection between the device and the supply air box. To avoid structure-borne sound transmission, the installation of flexible connections is recommended.

- Z** = Supply air box (only with flange or flexible connection, not compatible with frame for mineral/glass wool air duct) (standard)
- A** = Return air box (not compatible with frame for mineral/glass wool air duct)

INSULATIONS

The boxes have several heat and sound level options.

- I0** = without insulation (standard)
- I1** = Thermal insulation made of flexible elastomer foam of 10 mm in thickness, particularly suitable for avoiding condensate formation in the supply air box (cooling)
- I2** = Thermoacoustic insulation made of mineral wool of 20 mm in thickness (90 kg/m³), particularly suitable for reducing sound pressure and avoiding condensate formation
- I4** = Thermoacoustic insulation made of mineral wool of 40 mm in thickness (55 kg/m³), particularly suitable for reducing sound pressure at frequencies below 100 Hz and avoiding condensate formation

Insulation made of mineral wool with glass fleece coating. Eu-roclass certification A1, VDI 6022 and Eurofins Gold.

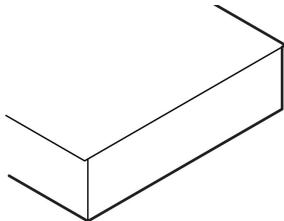

Attenuation per metre (dB/m)

TRANSITION PIECE FOR AIR DIFFUSER

NOTE

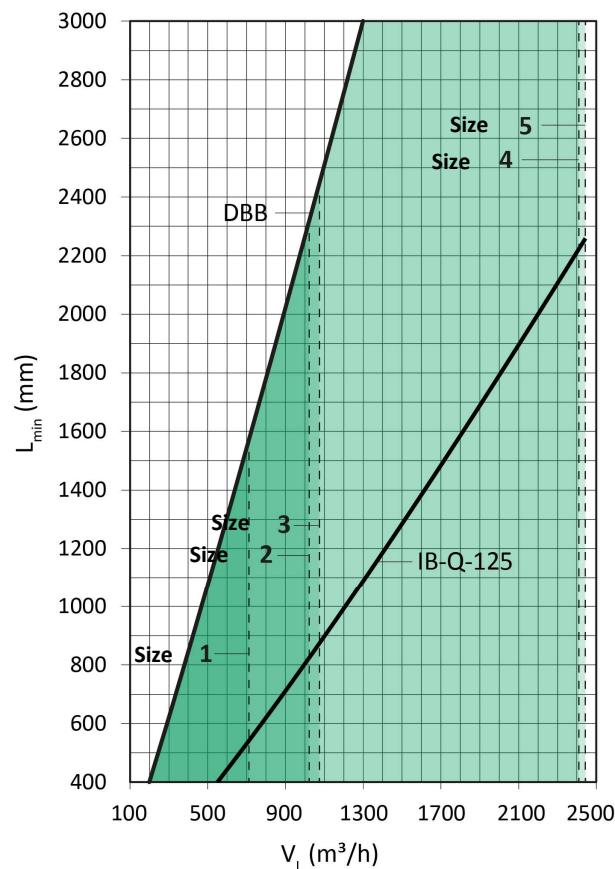

Transition piece and air diffuser are ordered and supplied separately.

The transition piece allows the installation of a supply air diffuser on the Aquaris Silent, this complete and compact solution is suitable for installation in a wide range of applications.

NOTE

The diagram shows the minimum length (L) at which the air diffuser does not generate the sound level above 35 dB(A).

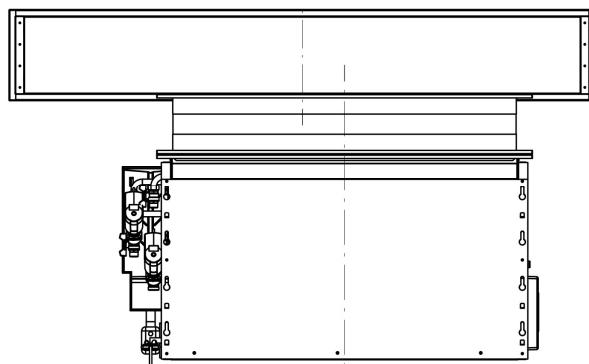

FAN CONVECTOR POSITION

The fan convector can be installed in different positions at the transition piece.

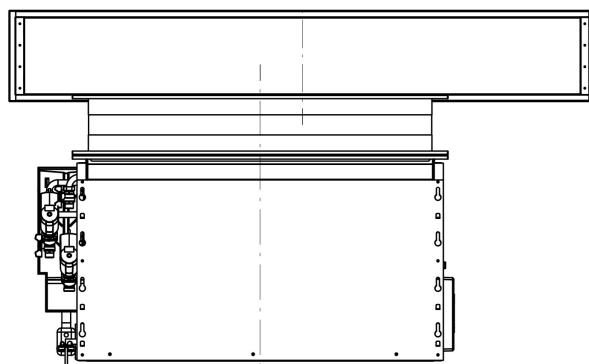

M = fan convector centred (standard)

R = fan convector offset to the right

L = fan convector offset to the left

INSULATION

The transition piece can be insulated on the inside with 10 mm flexible elastomer foam.

I0 = without insulation (standard)

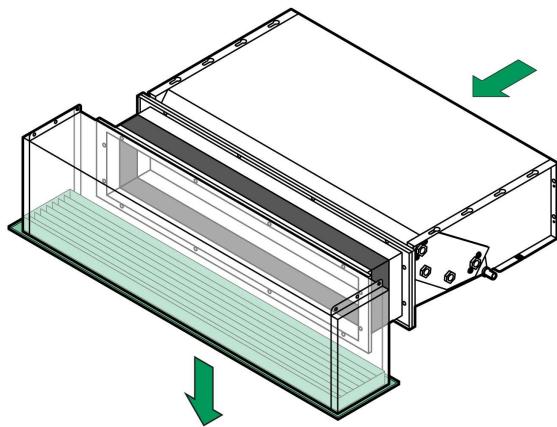

I1 = thermal insulation of 10 mm

AIR FLOW DIRECTION

The air flow direction passing through the transition piece to the air diffuser is straight as standard. The secondary air intake is also straight as standard.

1 = intake straight (standard)

Special designs upon request

AIR DIFFUSER

The transition piece can be selected with the ceiling air diffuser DBB made of sheet steel with individually adjustable regulating blades made of plastic material or with the air grille IB-Q with individually adjustable blades made of sheet steel. Other diffusers are possible upon special order.

D1 = with ceiling air diffuser DBB

R1 = with ventilation grille IB-Q

The diffusers are available in several colours. The standard colour is white RAL 9010 and the plastic parts are similar to RAL 9010. Further colours are available upon request.

22 = white similar to RAL 9010 (standard)

xy = colour of air diffuser xy according to table

x y	Colour	Plate DBB	Blades DBB	Grille IB-Q ¹⁾
0	unpainted	-	✓	-
1	black RAL 9005	■	✓	*
2	white RAL 9010	■	✓	*
3	white RAL 9016	■	✓	-
4	grey RAL 9006	■	✓	-

✓ = available | - = not available

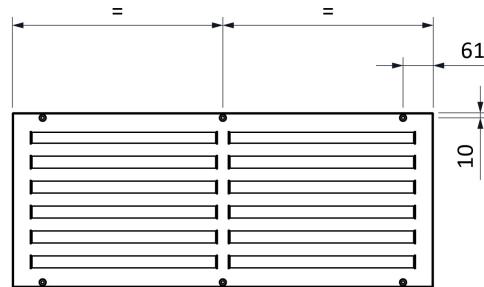

* the colour of plastic materials is similar to the specified RAL colour.

1) The grilles x and y have the same colour.

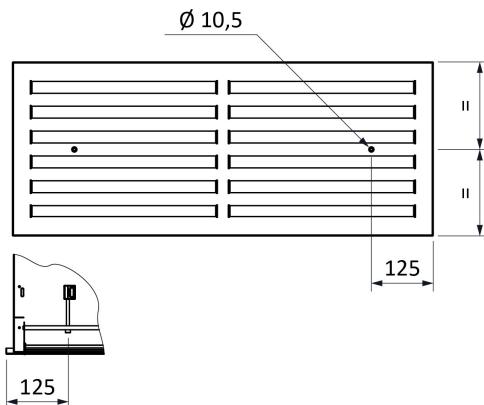

MOUNTING

The air diffusers can be fastened to the transition piece by means of visible or concealed mounting.

SM = visible mounting (standard)

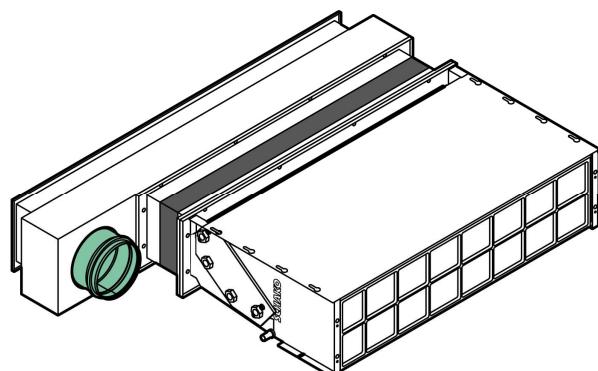

VM = concealed mounting

PRIMARY AIR

Integrated primary air spigots in the transition piece can be ordered optionally. The module for primary air then has a separation of primary and secondary air. In this way, the air jet remains stable even without fan convector operation.

DEVICE CASING

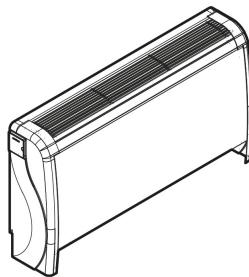

NOTE

The device casing is ordered and supplied separately.

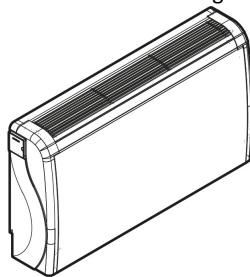

For installation in open space, SCHAKO offers an elegant device casing consisting of plastic side walls, galvanised steel sheet and aluminium parts. Thanks to the decorative design of the casing, it fits perfectly with the various room furnishings.

The series is available in different versions for all sizes and colours:

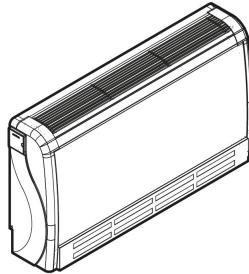

R0 = with secondary air open

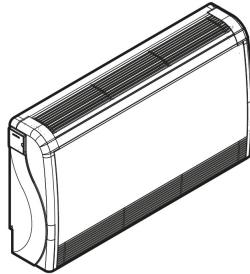

R1 = with secondary air closed without grille

R2 = with secondary air DBB

R3 = with secondary air PA

Colour

1	Black colour similar to RAL 9005	
2	White colour similar to RAL 9010	
3	White colour similar to RAL 9016	
4	Grey colour similar to RAL 9006	

RESTRICTIONS OF THE CASING

With horizontal casing design and additional condensate pan, type DBB with grille must be ordered. A condensate pump must be obligatorily installed for this.

The device casing is not compatible with horizontal floor mounting (-B).

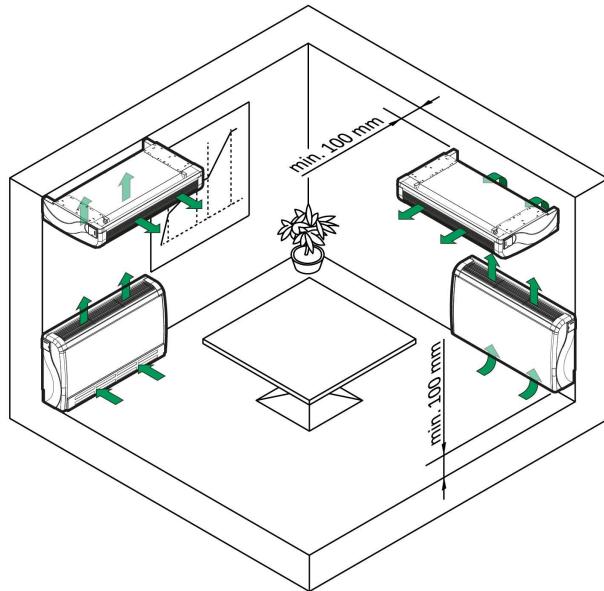

For horizontal casing with secondary air open, with PA grille or with secondary air closed, a condensate pump can be mounted but no additional condensate pan can be installed. With these models, the circuit elements for cooling must always be thermally insulated.

GV-AQS-1-H-R0-2-M1

Construction subject to change.

No return possible.

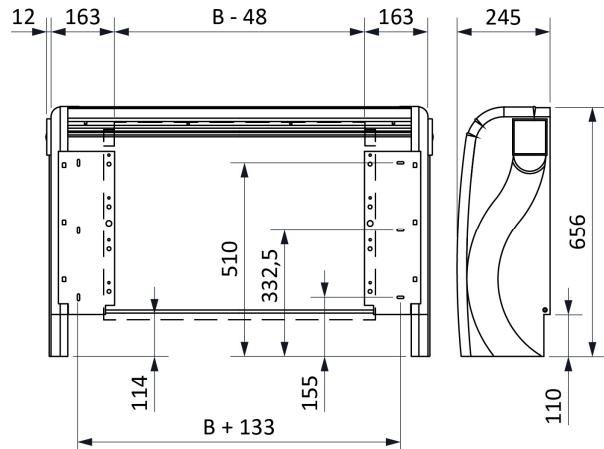

ASSEMBLY EXAMPLE

NOTE

The device casing can be ordered with or without mounting kit. The mounting kit is always required for new orders. The option without mounting kit is only available for the replacement orders.

DIMENSIONS

Size	B (mm)	Weight* (kg)
1	697	10.3
2	912	11.7
3	1247	14.0
4	1352	14.7
5	1597	16.3

*the weight includes the device casing -GV, fastening elements and screws
B = Device width (see page 5)

ACCESSORIES SUPPLIED LOOSE

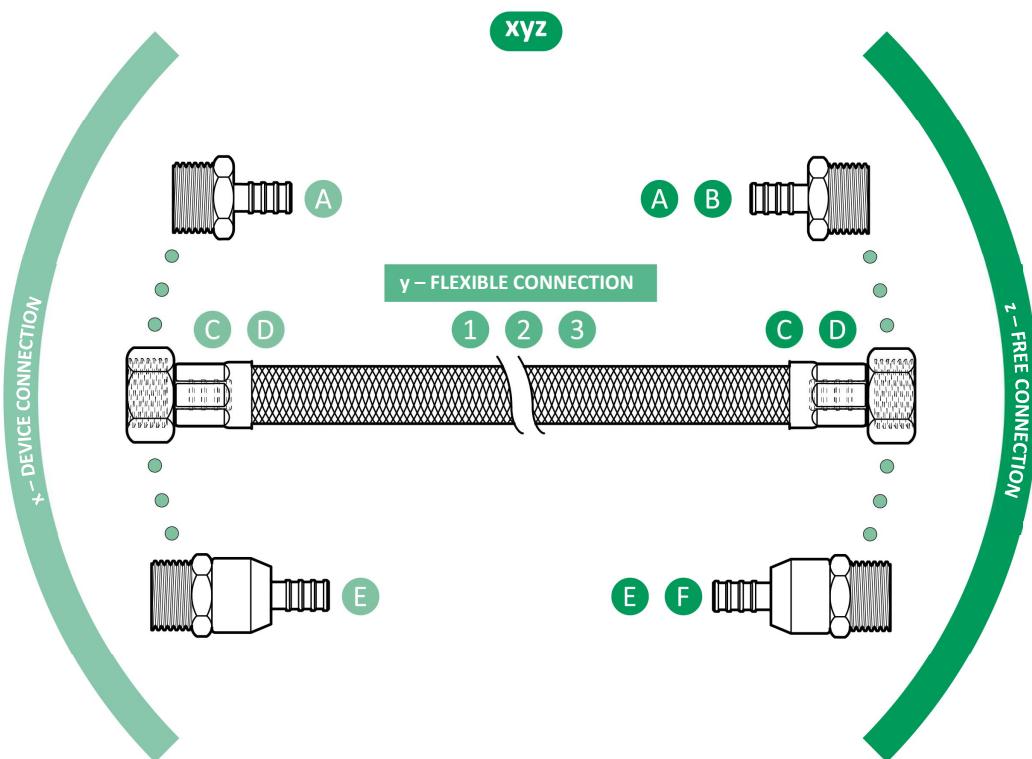

NOTE

All accessories are supplied loose for mounting on site outside the Aquaris Silent.

FLEXIBLE HYDRAULIC CONNECTION

The flexible hydraulic connection allows the connection to the hydraulic network and reduces the transmission of noise and kinetic energy from the network.

Hxyz = with device connection (x), flexible connection (y) and free connection to the hydraulic network (z) (for x, y, z, see diagram)

x, z	Connection	Type	Connection	
			(mm)	(Inch)
A	AG	External thread	-	AG 1/2
B	AG	External thread	-	AG 3/4
C	ÜMF	Flat seal spigot nut	-	IG 1/2
D	ÜMF	Flat seal spigot nut	-	IG 3/4
E	R-AG-D	Rotating male thread	-	AG 1/2
F	R-AG-D	Rotating male thread	-	AG 3/4

y	Flexible connection	Length (mm)	NW (mm)
1	EDE-13	500	13
2	EDE-13	800	13
3	EDE-13	1200	13

Flexible connection according to DIN 4726

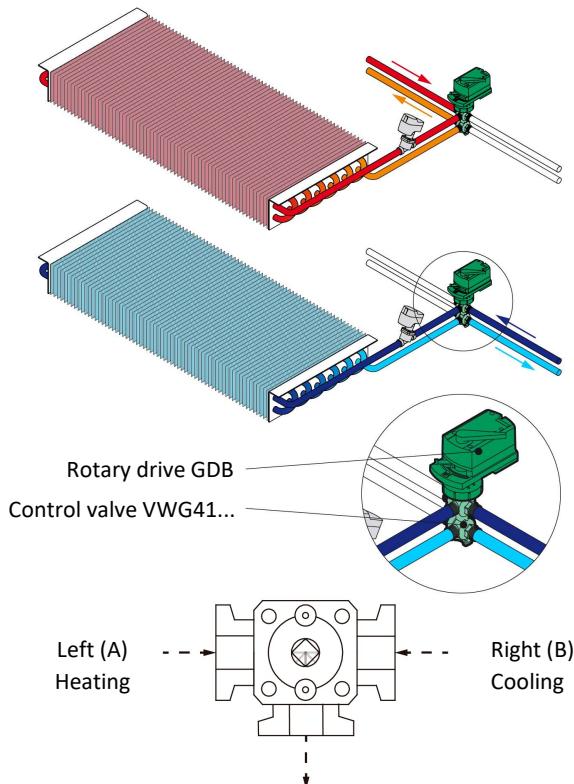

LWZ-Hxyz

Construction subject to change.

No return possible.

6-WAY BALL VALVE AND ROTARY DRIVE

The 6-way control valves with drive enable the use of devices with a single register in 4-pipe systems. The 6-way control valves are always supplied loose for mounting on site.

- 1 The water volumetric flow [m^3/h] can be found in the technical data or design program for heating and cooling.
- 2 Determination of the differential pressure Δp_{v10} above the completely opened valve. Experience shows that a differential pressure of 0.05 to 0.2 bar is sufficient in most systems.
- 3 Calculation of the volumetric flow k_v [m^3/h]

$$k_v = \frac{V_w}{\sqrt{\Delta p_{v10}}}$$

- 4 Select the valve y and the drive according to the following tables.

Legend of the table

✓ = Nominal value of volumetric flow possible | - = Nominal value of volumetric flow not possible | * = Volumetric flow is limited. For DN15 = 1.6 m^3/h , for DN20 = 3.45 m^3/h , for DN25 = 4.0 m^3/h | DN = Nominal width | k_{vs} = Nominal value of volumetric flow of cold water (5-30 °C) through the fully open ball valve at a differential pressure of 100 kPa / 1 bar.

Code	Rotary drive	Type	Actuator signal

ROOM THERMOSTAT

A room thermostat can be used both to actuate the actuators and to control the fans.

Code	Model	Operating voltage	ON/OFF	PWM	3-point	DC 0-10 V	Fan DC 0-10 V
TR05	RDG160T	AC/DC 24 V	2	-	-	2	✓
TK02	RDG160KN	AC 24 V	2	-	-	2	✓
TK04	RDG260KN	AC/DC 24 V	2	-	-	3	✓

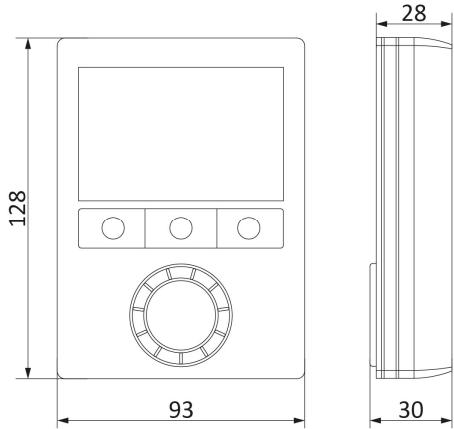

2 control outputs in total, On/Off (relay output) or DC

ATTENTION

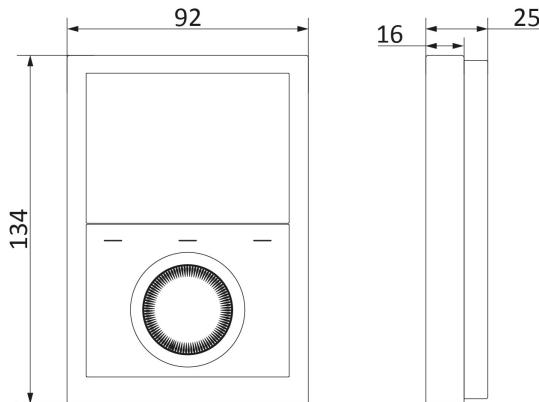

When operating the fan convectors in parallel, the load limits of the control and power consumption of the fan convectors must be taken into account.

Dimensions

INSTALLATION

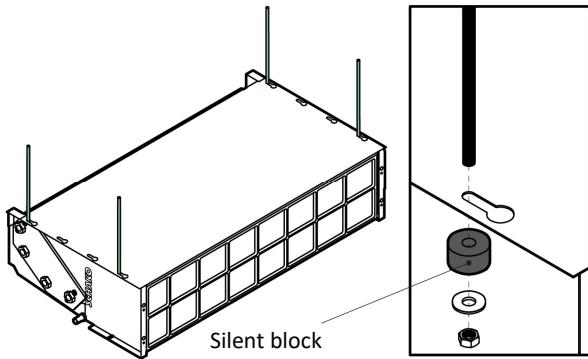

ATTENTION

For maintenance, service, retrofitting, etc., inspection openings in sufficient number and size must be provided on site.

When mounting the fan convector in a false ceiling, the device is fixed at a load-bearing ceiling using threaded bars or other fastening material and decoupling elements approved by the building supervisory authorities.

ATTENTION

Improper installation of the device results in high levels of structure-borne noise. Please install vibration damping elements. Please refer to the manufacturers' data sheets of the installation elements to dimension them according to the weight of the respective unit.

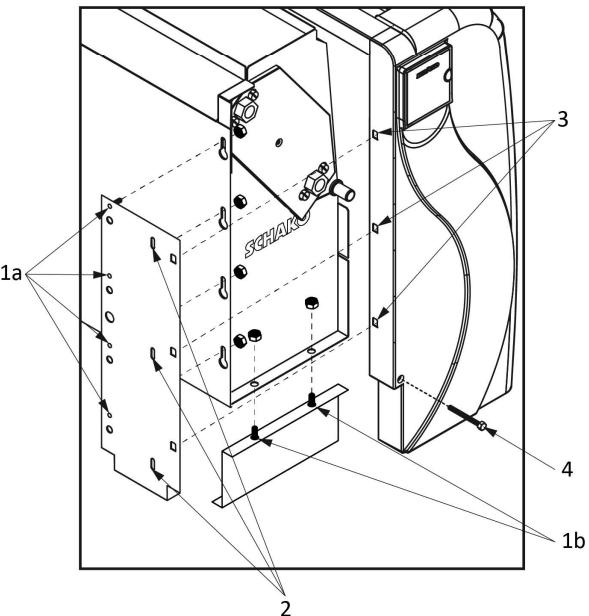

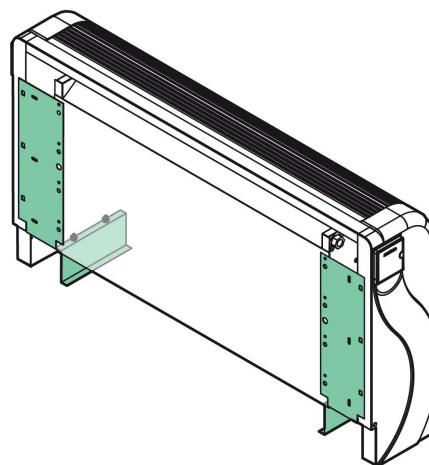

NOTE

The rods, screws or vibration damping devices required for installation are not included in the delivery.

INSTALLATION WITH DEVICE CASING

If the fan convector has a device casing, the latter is fastened to the sheet metal frame of the fan convector by means of the lugs.

- 1 Only if the device is not delivered mounted: screw the mounting plates to the housing (1a) and tighten the nuts (M6) of the mounting base (1b).
- 2 Fasten the Aquaris Silent to the wall/ceiling.
- 3 Position the housing and fasten it by means of the fastening hooks.
- 4 Fasten the housing on both sides of the Aquaris Silent using M6x60 screws.

CIRCUIT DIAGRAMS

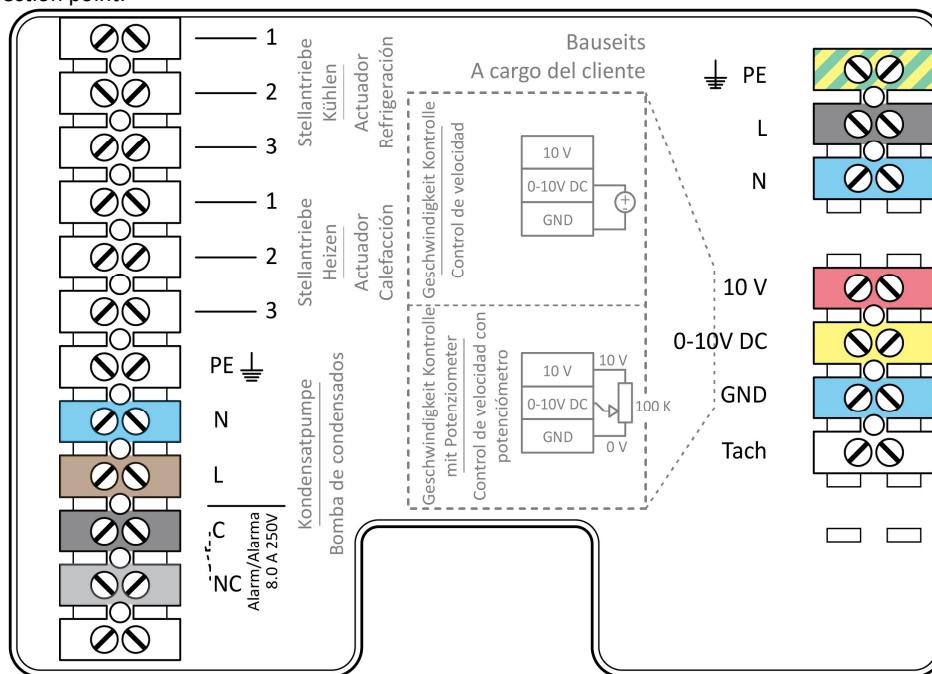

Prior to the electrical installation, you have to make sure that the rated mains voltage is 230 V, 50/60 Hz and single-phase.

The delivered motors have insulation of type B and protection class I. The electrical connection must only be made by qualified personnel, observing the current regulations and the low-voltage regulations.

SCHAKO recommends the exclusive use of copper cables, since the device connections have not been designed for accommodating other types of cables. If they are used nevertheless, galvanic corrosion or generation of heat could take place at the connection point.

ATTENTION

Connect the fan convector via an earthing cable. Interrupt the power supply, before carrying out any electrical connection work. SCHAKO cannot be held liable for faulty electrical connections or if the power supply cable is replaced with a different cable having different characteristics.

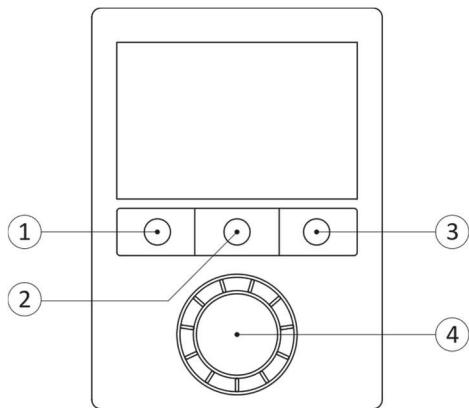

Cable	Function/assignment	Cable colour
Fan	PE	Protective conductor green/yellow
	L	Phase (230 V AC) black
	N	Neutral conductor blue
	10 V	Voltage output 10 V DC 1.1 mA, galvanically separated, short-circuit-proof red
	0-10 V DC	Control input 0-10 V or PWM, galvanically separated yellow
	GND	GND connection of control interface blue
	Tach	Speed output: Open Collector, 1 impulse per revolution, galvanically separated $I_{sink, max.} = 10 \text{ mA}$ white
Actuator	1	Power supply according to actuator
	2	Neutral conductor according to actuator
	3	Regulation according to actuator
	N	Neutral conductor blue
Condensate pump	L	Power supply brown
	C	Safety contact NC 8 A resistive load – 250V black
	NC	Safety contact NC 8 A resistive load – 250V grey

PROGRAMMING THE RDG160T THERMOSTAT

NOTE

The following are the steps to install and configure the RDG160T thermostat with the Aquaris Silent device. For more information or for different thermostat models, please refer to the specific instructions of the manufacturer.

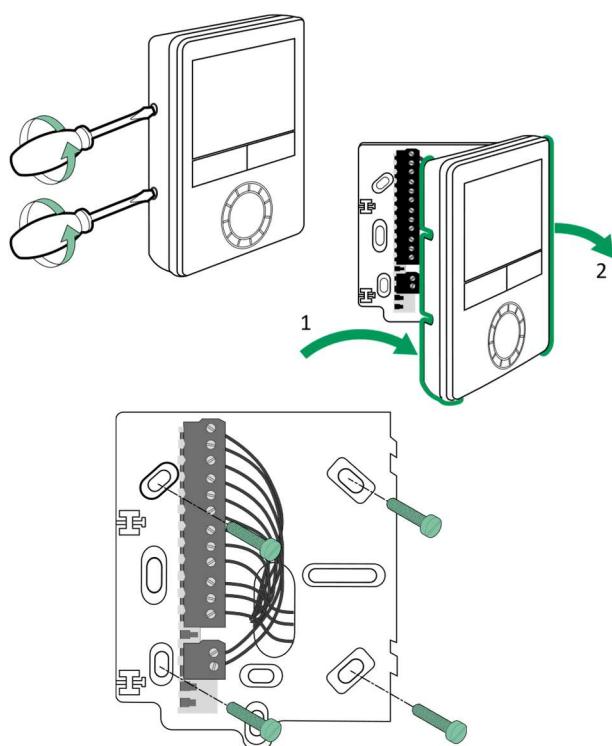

0 Device installation

- 1 = Operating mode selection button/back to normal operation
- 2 = Button to set time and switching times of the timer
- 3 = Fan operation selection button/OK
- 4 = Rotary knob to set nominal values and parameters

1 Installation

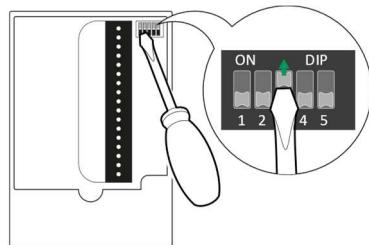

Remove the housing and install the bottom part at the desired position.

Construction subject to change.

No return possible.

2 DIP switch settings

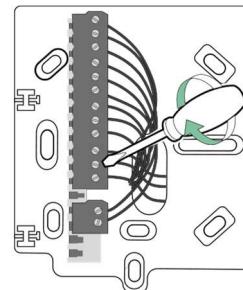

2a Set the function via switches 1-3. OFF by default.

2-pipe system		4-pipe system	
ON		ON	
OFF	1 2 3 4 5	OFF	1 2 3 4 5

2b Check whether switch 4 is set to OFF (OFF corresponds to 0-10 V DC fan). OFF by default.

2c Activate or deactivate the time functions with switch 5. OFF (activated) by default.

3 Wiring

Connect the devices according to the circuit diagrams on page 28.

4 Configuration of the parameters

4a To access parameter setting P01-15, press the left and right buttons simultaneously for 4 seconds, release them and press the right button again for 2 seconds. "P01" appears on the display. Select the desired parameter with the rotary knob and press OK.

To access the remaining parameters, press the left and right buttons simultaneously for 4 seconds. Release the left button and press it again for 2 seconds until the temperature display disappears. Turn the rotary knob ½ turn counterclockwise.

Select the desired parameter with the rotary knob. Press OK to access the parameter (flashes) and select the desired option with the rotary knob. Press OK to accept or Esc to exit.

4b Set the parameters according to the following table:

NOTE

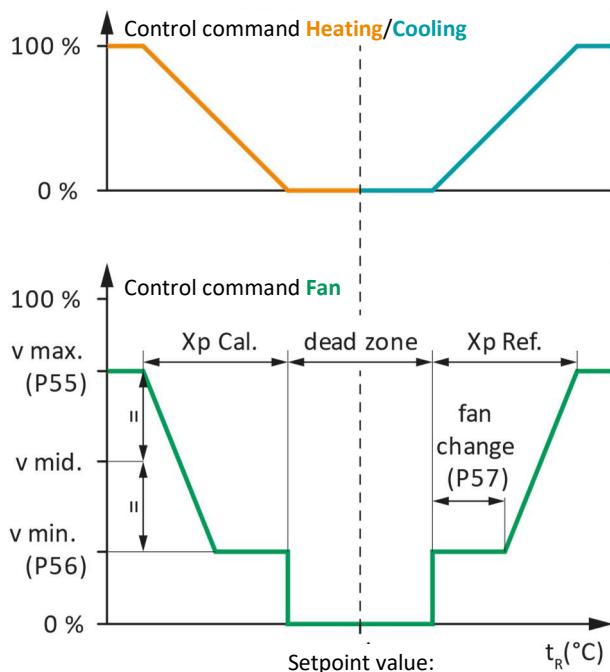

It is not necessary to change the standard value of the X1, X2, D1 (P38-43) parameters if no sensors are connected.

Applikation	Range
P01 Control sequence (factory setting for 2-pipe: 1, for 4-pipe: 4)	0 = heating only 1 = cooling only 2 = manual switchover H/C 3 = automatic switchover H/C 4 = heating and cooling
P38 Functionality X1 (fact. set. 1)	0 = No function 1 = Room temp. ext/return air temp.
P40 Functionality X2 (fact. set. 2)	2 = Switchover H/C 3 = Operating mode contact
P42 Functionality D1 (fact. set. 3)	4 = Dew point sensor 5 = Enable electrical heating 6 = Fault input 9 = Supply air sensor*
P39 Direction of action of X1 if digital input (fact. set. NO)	NO = Work contact/open NC = Rest contact/closed
P41 Direction of action of X2 if digital input (fact. set. NO)	
P43 Direction of action of D1 if digital input (fact. set. 0 (NO))	
P46 Output 1 (fact. set. 2)	1 = On/Off (terminals Q1) 2 = DC 0-10 V (terminals Y10)
P47 Output 2 (fact. set. 2)	1 = On/Off (terminals Q2) 2 = DC 0-10 V (terminals Y20)
P52 Fan operation (factory setting 1)	0 = locked 1 = enabled 2 = heating only 3 = cooling only
P55 Fan max. power ** (fact. set. 80%)	Fan min....100%
P56 Fan min. power ** (fact. set. 30%)	1 fan max. %
P57 Fan switching point (fact. set. 10%)	1-100 %

* Only for X1, X2

** See below

Fan control sequence (example of a 4-pipe installation with proportional actuators):

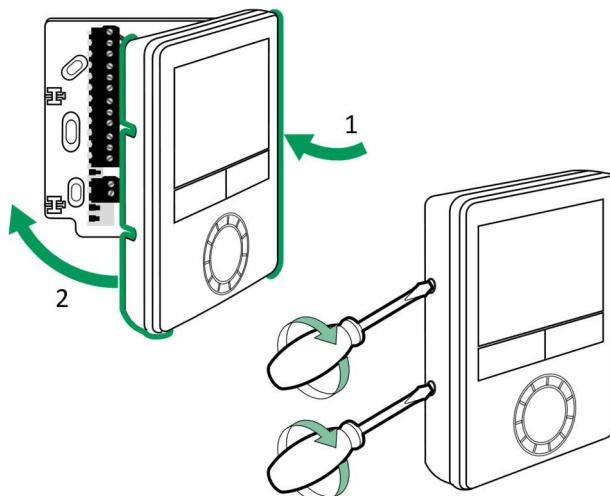

Xp = proportional band (parameters P30 and P31)

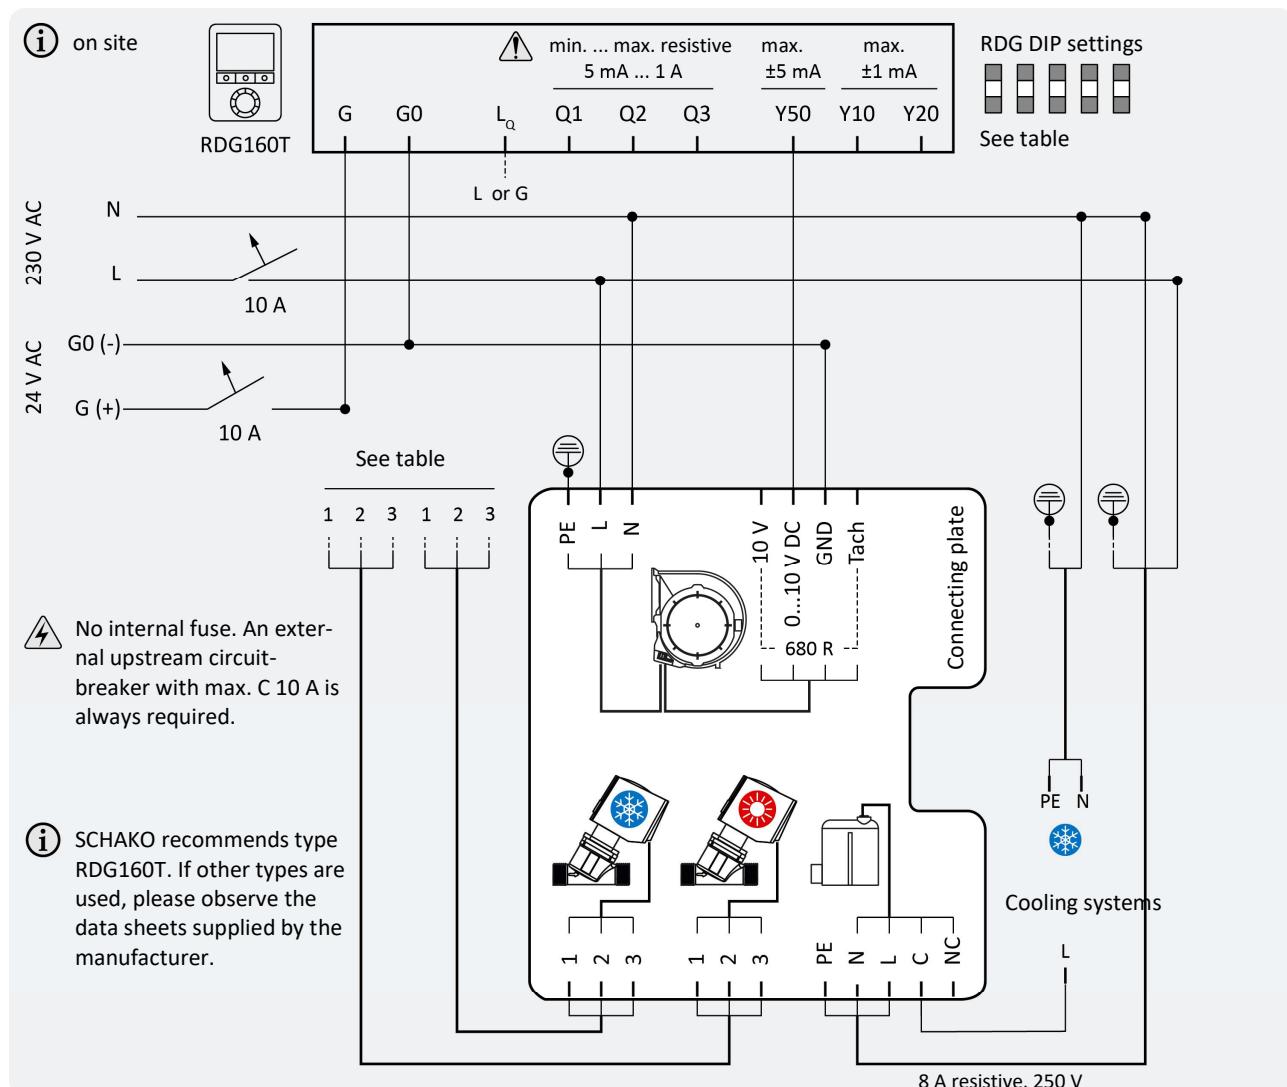

t_R = room temperature

5 Mounting

Reattach the housing.

MAINTENANCE

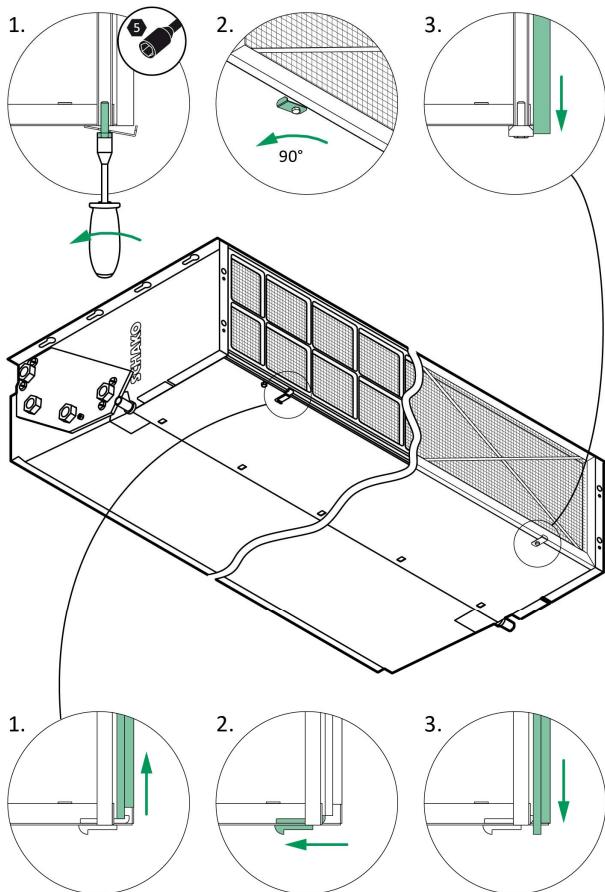

AIR FILTER

The filters must be cleaned or replaced regularly. SCHAKO recommends a bimonthly check at high-medium air quality and a monthly check at low air qualities.

ATTENTION

The filter must be maintained at least once a year to ensure proper operation of the device and to meet hygiene requirements.

SCHAKO recommends purchasing replacement filters to avoid prolonged downtimes during maintenance activities.

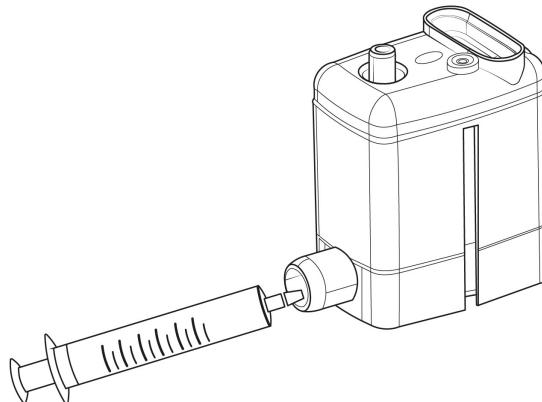

HEAT EXCHANGER

The registers must be ventilated once every three months and the ribs should be checked to ensure that there are no leaks.

CONDENSATE DISCHARGE

The condensate pans, the drain pipes and their connections must be checked twice a year for corrosion and leaks and all these parts must be cleaned.

The pump can be cleaned with clean water if it is clogged.

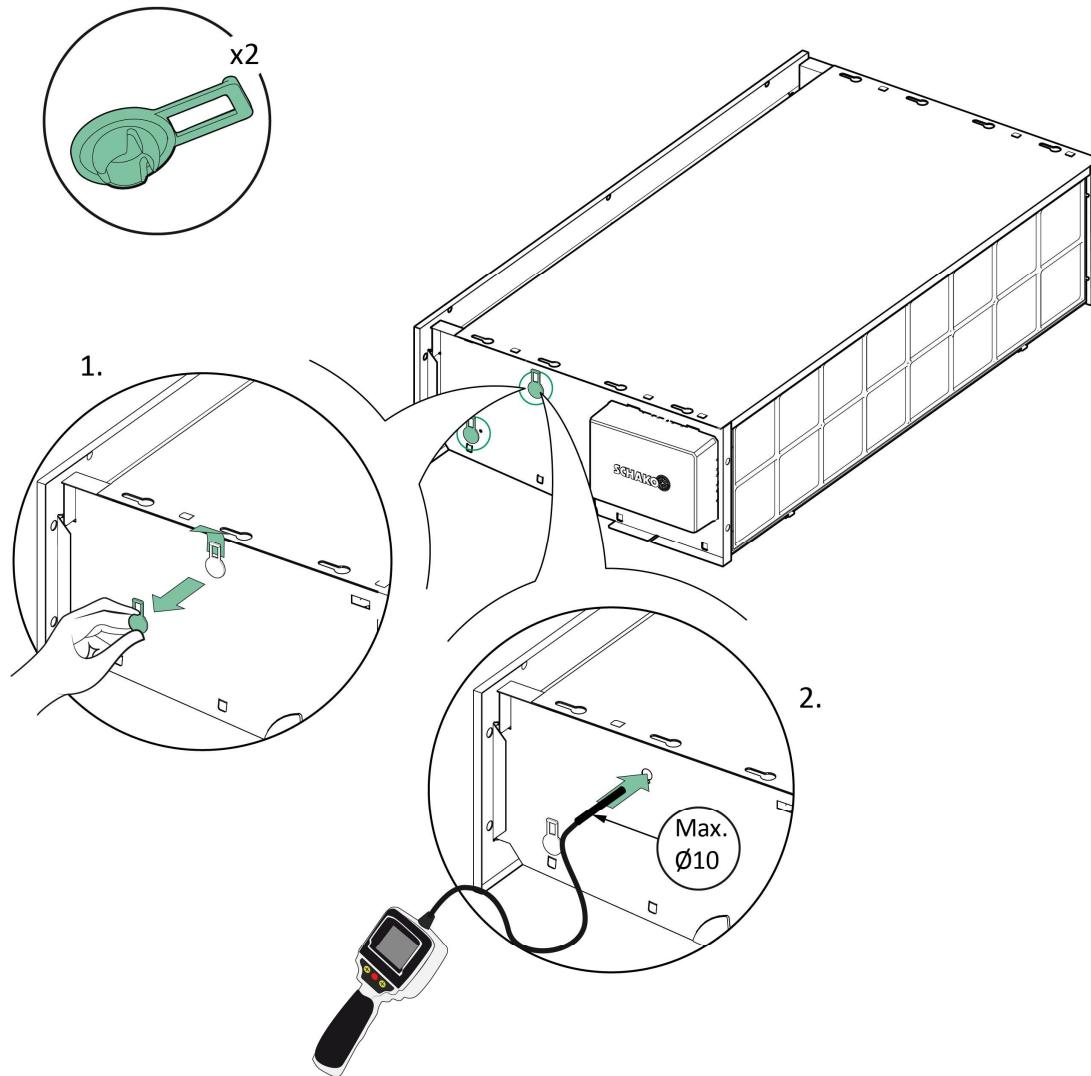

MOTORIZED FAN

Twice a year, the fan operation must be checked in the different speeds to ensure that no exceptional noise is generated and that the motor intensity does not exceed the maximum allowed value.

HYGIENE CONTROL OF THE HEAT EXCHANGERS AND THE CONDENSATE PAN

The registers and condensate pan of the Aquaris Silent must be randomly checked once every two years to meet hygiene requirements.

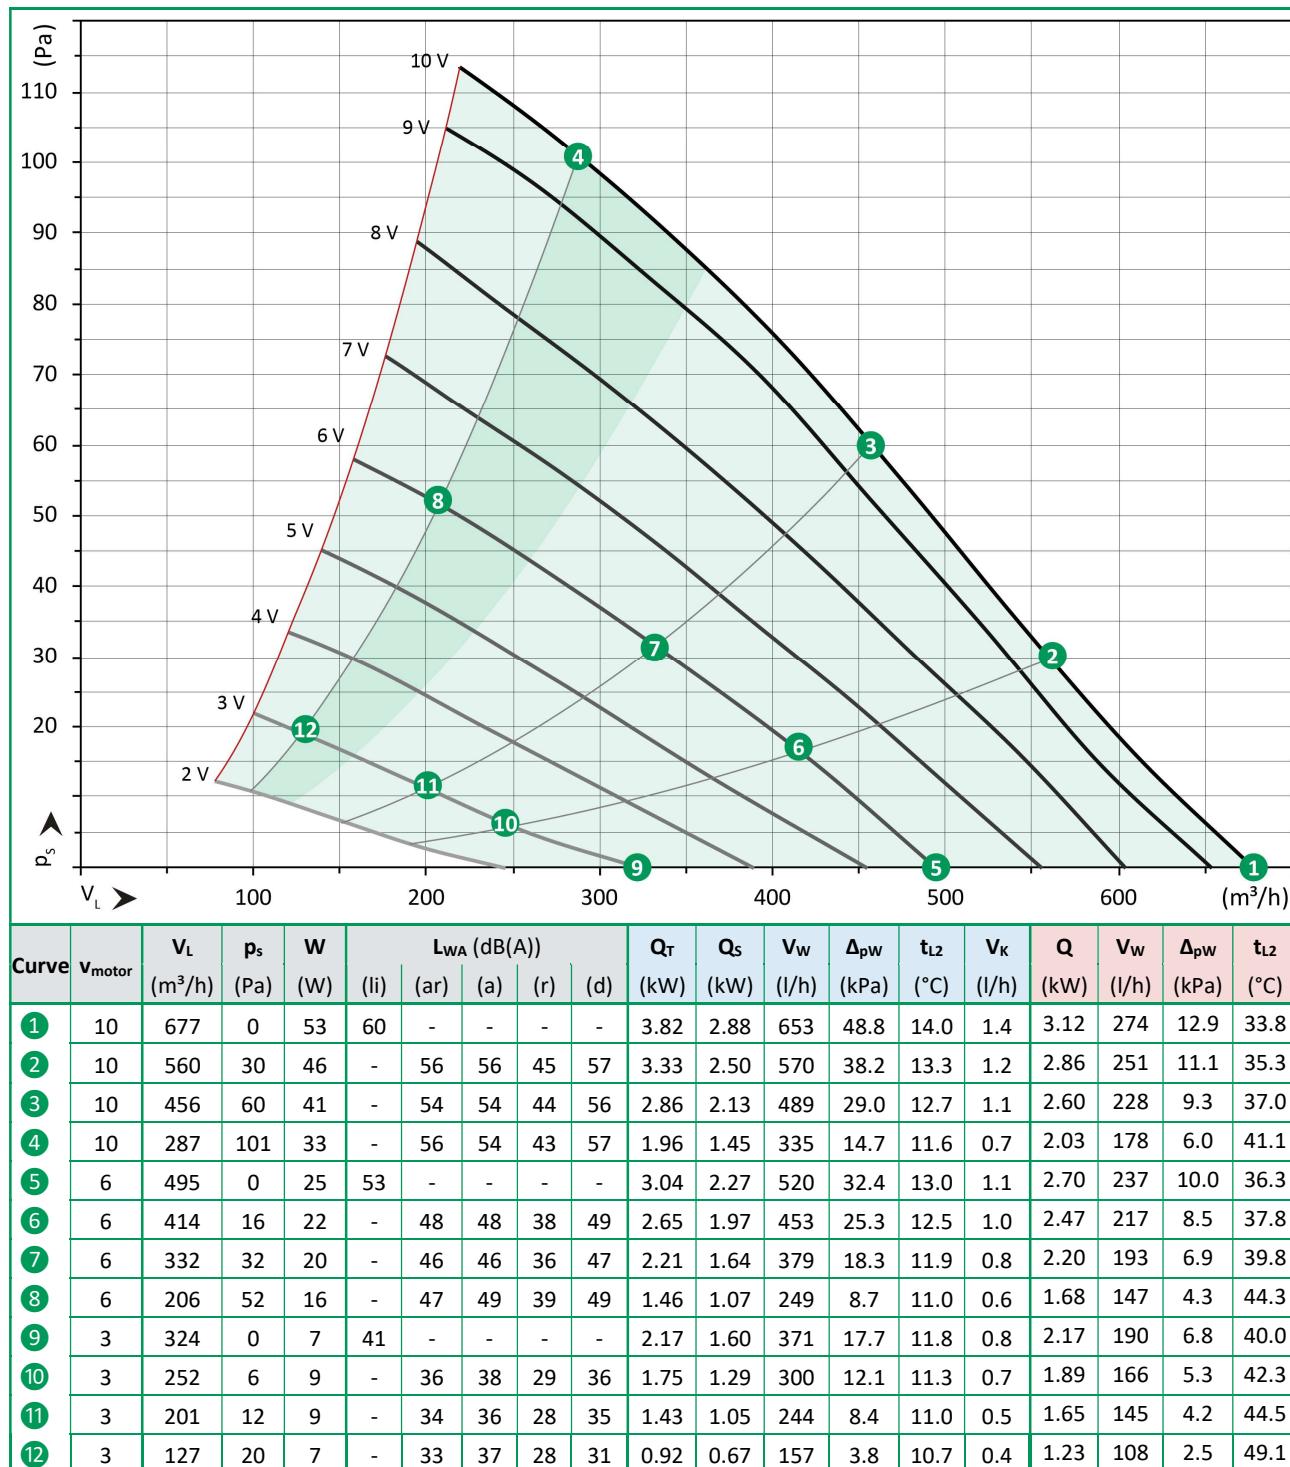

The Aquaris Silent has two openings on each side for hygienic inspection of the heat exchangers and the condensate pan. The openings are accessed via plugs that can be removed without tools.

**ATTENTION**

After performing the inspection work, the plugs must be refitted.

TECHNICAL DATA

AQS-EC-1-L4-C1

Heating (1 row of pipes): t_{w1} = 65 °C, t_{w2} = 55 °C, t_r = 20 °C

Cooling (3 pipe rows): t_{w1} = 7 °C, t_{w2} = 12 °C, t_r = 27 °C, HR = 47 %

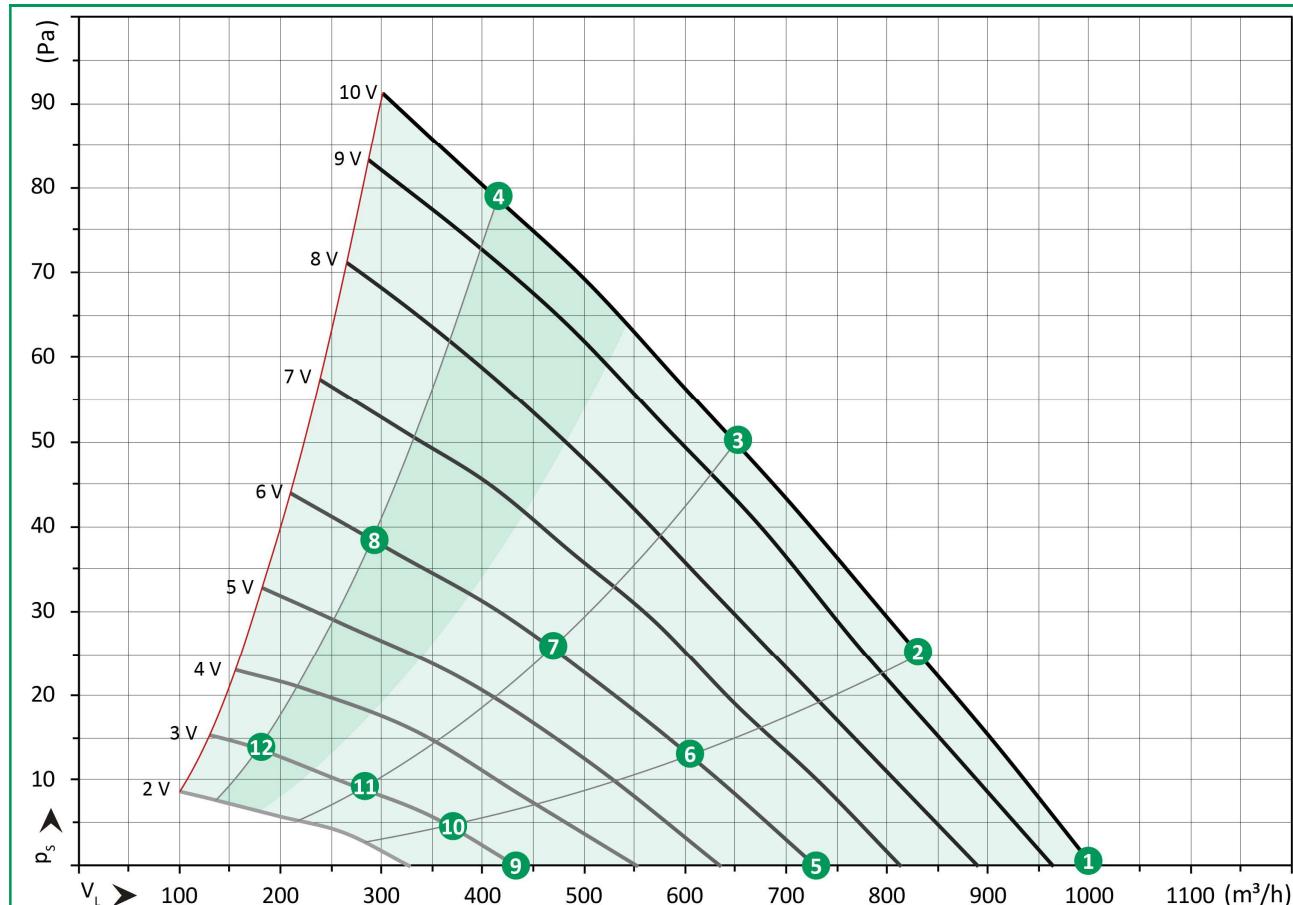

Available static pressure values with clean filter.

Thermal efficiency according to DIN EN 1397. Flow data according to DIN EN ISO 5801. Sound power level according to DIN EN 16583.

EXAMPLE CALCULATION OF THE SOUND PRESSURE LEVEL

Following a simplified example from *AHRI Standard 885*. Other confirmed working methods can be used.

Select a fan convector of size 2, with 4 pipes, -C1 filter and double-sided duct connection. The working conditions are: 400 m³/h air volume and available pressure 35 Pa (signal = 6.3 V).

The following hypotheses are taken into account:

- The noise radiated by the ducts (breakout noise) can be neglected, as it is assumed that it will be lower compared to the values of the most important main and secondary sources.
- The structure-borne noise transmission is insignificant. It is assumed that the installation has been carried out according to best practice.
- Influences from sources other than those indicated in the example are not considered.
- No environmental correction is applied (*ASHRAE RP755*).
- No transmission losses of the diffusers are taken into account.

The noise sources and attenuations of the boxes are taken directly from the SCHAKO layout program. The attenuation of the technical ceiling is taken from the manufacturer's data sheet. The room insulation can be calculated by the following formula:

$$\Delta L_W = 10 \log \left[\frac{Q}{4\pi r^2} + \frac{4}{R} \right] + 0,5$$

Q = direction of noise source

r = distance from noise source (m)

R = room constant = S·α/(1 - α)

α = sound absorption coefficient (-)

S = sum of the room surface areas (m²)

The arithmetic sums are calculated according to the following formula:

$$L_{W,teilweise} = L_W - \sum_{i=1}^n Dämpfung_i$$

n = number of attenuations used

The energy sums are calculated according to the following formula:

$$L_{W,resultierend} = 10 \cdot \log \sum_{i=1}^m 10^{\frac{LW_i}{10}}$$

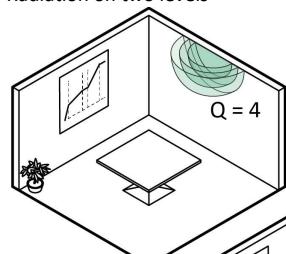

m = number of noise sources

Construction subject to change.

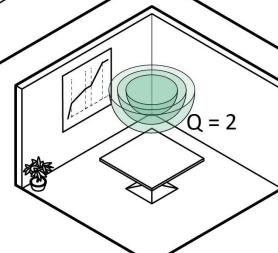

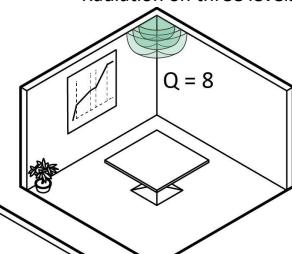

No return possible.

Direction factors Q:

Radiation on two levels

Radiation on three levels

Radiation on one level

Sound attenuation values α

Example			
-S2	-0	-K0	-0

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

* = if no details are given, processing is impossible.

EXAMPLE

AQS-EC-1-R3-C1-H-1-F0-W1-00-00-000-S2-0-K0-0

Fan convector Aquaris Silent | EC motor | size 1 | 2-pipe register 3 pipe rows (heating or cooling) | ISO Coarse < 40% | horizontal – ceiling | secondary air intake, straight | without flange | water connection in air flow direction on the left | without cooling valve, without pipe set, without shut-off valve | without heating valve, without pipe set, without shut-off valve | without actuator | electrical connection in air flow direction right | without additional control and regulation elements | without valve condensate pan | without condensate pump

ORDER DETAILS

01 - Type

AQS = fan convector Aquaris Silent

05 - Air filter

C1 = ISO Coarse < 40% (standard)

C4 = ISO Coarse 40%

02 - Motor

EC = EC motor

06 - Mounting

H = horizontal – ceiling (standard)

B = horizontal – floor (not compatible with device casing GV)

V = vertical – wall

03 - Size*

1 = Size 1

2 = Size 2

3 = Size 3

4 = Size 4

5 = Size 5

07 - Intake position

1 = secondary air intake, straight (standard)

04 - System (water register version)*

R1 = 2-pipe register 1 pipe row (heating)

R3 = 2-pipe register 3 pipe rows (cooling or heating)

L4 = 4-pipe register 1 and 3 pipe rows (heating and cooling)

08 - Duct connection

F0 = without flange (standard)

FZ = with supply air flange

09 - Water connection position

- W1 = water connection in air flow direction on the left (standard) (not possible for electric connection position -S1)
 W2 = water connection in air flow direction on the right (not possible for electric connection position -S2)

10 - Cooling valve

- 00 = without cooling valve, without pipe set, without shut-off valve (standard)
 01 = cooling valve VPP46.10L0.2 with pipe set and shut-off valve
 02 = cooling valve VPP46.10L0.4 with pipe set and shut-off valve
 03 = cooling valve VPP46.15L0.2 with pipe set and shut-off valve
 04 = cooling valve VPP46.15L0.6 with pipe set and shut-off valve
 05 = cooling valve VPP46.20F1.4 with pipe set and shut-off valve (valves with connection $\geq 1"$ are supplied loose)
 25 = cooling valve AB-QM-003Z8221 with pipe set and shut-off valve
 26 = cooling valve AB-QM-003Z8220 with pipe set and shut-off valve
 27 = cooling valve AB-QM-003Z8222 with pipe set and shut-off valve
 31 = cooling valve AB-QM-003Z8223 with pipe set and shut-off valve (valves with connection $\geq 1"$ are supplied loose)

11 - Heating valve

- 00 = without heating valve, without pipe set, without shut-off valve (standard)
 01 = heating valve VPP46.10L0.2 with pipe set and shut-off valve
 02 = heating valve VPP46.10L0.4 with pipe set and shut-off valve
 03 = heating valve VPP46.15L0.2 with pipe set and shut-off valve
 04 = heating valve VPP46.15L0.6 with pipe set and shut-off valve
 05 = heating valve VPP46.20F1.4 with pipe set and shut-off valve (valves with connection $\geq 1"$ are supplied loose)
 25 = heating valve AB-QM-003Z8221 with pipe set and shut-off valve
 26 = heating valve AB-QM-003Z8220 with pipe set and shut-off valve
 27 = heating valve AB-QM-003Z8222 with pipe set and shut-off valve
 31 = heating valve AB-QM-003Z8223 with pipe set and shut-off valve (valves with connection $\geq 1"$ are supplied loose)

12 - Actuator

- 000 = without actuator (standard)
 T01 = with thermal actuator SAST127474
 T02 = with thermal actuator SAST127475
 T03 = with thermal actuator SAPV127957
 T04 = with thermal actuator SAPV128561
 T05 = with thermal actuator SMPV132351
 M01 = with motorised actuator SMPO132353
 M02 = with motorised actuator SMPO132352
 M03 = with motorised actuator SAPO129150

13 - Position of electrical connection

- S1 = electrical connection in air flow direction on the left (not possible for water connection position -W1)
 S2 = electrical connection in air flow direction on the right (standard) (not possible for water connection position -W2)
 S3 = with offset electrical connection box in air flow direction on the left 1.5 m (not possible for combination of vertical mounting -V and water connection position -W1)
 S4 = with offset electrical connection box in air flow direction on the right 1.5 m (not possible for combination of vertical mounting -V and water connection position -W2)

14 - Additional control and regulation elements

- 0 = without additional control and regulation elements (standard)
 1 = with fault message output
 2 = with EC interface for 3-stage controller

15 - Valve condensate pan

- K0 = without valve condensate pan (standard)
 KH = with valve condensate pan on the side of the hydraulic connection

16 - Condensate pump

- 0 = without condensate pump (standard)
 1 = with condensate pump Si-10, mounted ex works

FLEXIBLE CONNECTION ORDER CODE

01	02	03	04	05
Type	Family	Model	Size	Model
Example				

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

* = if no details are given, processing is impossible.

EXAMPLE

FA-AQS-000-1-Z1

Flexible connection | for fan convector Aquaris Silent | standard product | size 1 | 150 mm for supply air

ORDER DETAILS

01 - Type

FA = flexible connection

02 - Family

AQS = for fan convector Aquaris Silent

03 - Model

000 = standard product

04 - Size*

1 = Size 1

2 = Size 2

3 = Size 3

4 = Size 4

5 = Size 5

05 - Model*

Z1 = 150 mm for supply air

Z2 = 290 mm for supply air

A1 = 150 mm for return air

A2 = 290 mm for return air

ORDER CODE OF FRAME FOR MINERAL/GLASS WOOL AIR DUCT

01	02	03	04
Type	Family	Size	Model
Example			

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

* = if no details are given, processing is impossible.

EXAMPLE

FW-AQS-1-Z

Frame for mineral/glass wool air duct | for fan convector Aquaris Silent | size 1 | for supply air

ORDER DETAILS

01 - Type

FW = frame for mineral/glass wool air duct

02 - Family

AQS = for fan convector Aquaris Silent

03 - Size*

1 = Size 1

2 = Size 2

3 = Size 3

4 = Size 4

5 = Size 5

04 - Model*

Z = for supply air

A = for return air

PLENUM BOX ORDER CODE

01	02	03	04	05	06	07
Type	Family	Model	Size	Model	Length	Insulation
Example						
PL	-AQS	-000	-1	-Z	-0500	-I1

08	09	10
Connection in air flow direction	in air flow direction on the left	in air flow direction on the right
Example		
-MAB	-L00	-R00

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

* = if no details are given, processing is impossible.

EXAMPLE

PL-AQS-000-1-Z-0500-I1-MAB-L00-R00

Plenum box | for fan convector Aquaris Silent | standard product | size 1 = 720 mm | supply air box | L = 500 mm | thermal insulation of 10 mm | closed in air flow direction | without spigot in air flow direction on the left | without spigot in air flow direction on the right

ORDER DETAILS

01 - Type

PL = Plenum box

02 - Family

AQS = for fan convector Aquaris Silent

03 - Model

000 = standard product

04 - Size*

1 = size 1 = 720 mm

2 = size 2 = 935 mm

3 = size 3 = 1270 mm

4 = size 4 = 1375 mm

5 = size 5 = 1620 mm

05 - Model*

Z = supply air box (only with flange or flexible connection, not compatible with frame for mineral/glass wool air duct)

A = return air box (not compatible with frame for mineral/glass wool air duct)

06 - Length*

0200 = L = 200 mm

0300 = L = 300 mm

0400 = L = 400 mm

0500 = L = 500 mm

0600 = L = 600 mm

0700 = L = 700 mm

0800 = L = 800 mm

0900 = L = 900 mm

1000 = L = 1000 mm

1100 = L = 1100 mm

xxxx = length in mm (from 200 to 1100, always with 4 digits in mm)

07 - Insulation

I0 = without insulation

I1 = thermal insulation of 10 mm (standard)

I2 = sound and thermal insulation of 20 mm (height of box 280 mm with spigot DN198)

I4 = sound and thermal insulation of 40 mm (height of box 280 mm with spigot DN158 or DN198)

08 - Connection in air flow direction*

- M00 = closed in air flow direction
- MAB = open in air flow direction
- MRE = connecting flange in air flow direction
- M1x = with x spigot DN123 in air flow direction (for number of spigots, see table on page 15)
- M2x = with x spigot DN158 in air flow direction (height of box 280 mm with -I4, for number of spigots, see table on page 15)
- M3x = with x spigot DN198 in air flow direction (height of box 280 mm with -I2 or -I4, for number of spigots, see table on page 15)

09 - Connection in air flow direction on the left*

- L00 = without spigot
- L1x = x DN123 R (for number of spigots, see table on page 15)
- L2x = x DN158 R (height of box 280 mm with -I4, for number of spigots, see table on page 15)
- L3x = x DN198 R (height of box 280 mm with -I2 or -I4, for number of spigots, see table on page 15)

10 - Connection in air flow direction on the right*

- R00 = without spigot
- R1x = x DN123 L (for number of spigots, see table on page 15)
- R2x = x DN158 L (height of box 280 mm with -I4, for number of spigots, see table on page 15)
- R3x = x DN198 L (height of box 280 mm with -I2 or -I4, for number of spigots, see table on page 15)

ORDER CODE OF TRANSITION PIECE FOR AIR DIFFUSER

01	02	03	04	05	06	07
Type	Family	Size	Model	Length	Fan convector position	Insulation
Example						
US	-AQS	-1	-Z	-1000	-M	-I0

08	09	10	11	12	13
Air flow direction	Air diffuser	Air diffuser colour	Mounting	Primary air connection spigot	Primary air spigot diameter
Example					
-1	-D1	-22	-SM	-P0	-0

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

* = if no details are given, processing is impossible.

EXAMPLE

US-AQS-1-Z-1000-M-I0-1-D1-22-SM-P0-0

Transition piece for air diffuser | for fan convector Aquaris Silent | size 1 | for supply air | length L = 1000 mm | fan convector centred | without insulation | intake straight | with ceiling air diffuser DBB | white similar to RAL 9010 | visible mounting | without primary air connection spigot

ORDER DETAILS

01 - Type

US = transition piece for air diffuser

02 - Family

AQS = for fan convector Aquaris Silent

03 - Size*

1 = Size 1
 2 = Size 2
 3 = Size 3
 4 = Size 4
 5 = Size 5

04 - Model

Z = for supply air (standard)

05 - Length

xxxx = length L = xxxx mm (L_{min.} according to table on page 18, always with 4 digits in mm)

06 - Fan convector position

M = fan convector centred (standard)
 R = fan convector offset to the right
 L = fan convector offset to the left

07 - Insulation

I0 = without insulation (standard)
 I1 = thermal insulation of 10 mm

Construction subject to change.

No return possible.

08 - Air flow direction

1 = intake straight (standard)

09 - Air diffuser*

D1 = with ceiling air diffuser DBB
 R1 = with ventilation grille IB-Q

10 - Air diffuser colour

22 = white similar to RAL 9010 (standard)
 xy = colour of air diffuser xy according to table

11 - Mounting

SM = visible mounting (standard)
 VM = concealed mounting

12 - Primary air connection spigot

P0 = without primary air connection spigot (standard)

13 - Primary air spigot diameter

0 = without primary air connection spigot (standard)

DEVICE CASING ORDER CODE

01	02	03	04	05	06	07
Type	Family	Size	Mounting	Secondary air grille	Colour	Mounting kit
Example						
GV	-AQS	-1	-H	-R0	-2	-M1

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

* = if no details are given, processing is impossible.

EXAMPLE

GV-AQS-1-H-R0-2-M1

Device casing | for fan convector Aquaris Silent | size 1 | horizontal – ceiling | with secondary air open | white colour similar to RAL 9010| with mounting kit

ORDER DETAILS

01 - Type

GV = device casing

02 - Family

AQS = for fan convector Aquaris Silent

03 - Size*

- 1 = Size 1
- 2 = Size 2
- 3 = Size 3
- 4 = Size 4
- 5 = Size 5

04 - Mounting

- H = horizontal – ceiling (standard)
- V = vertical – wall

05 - Secondary air grille

- R0 = with secondary air open (standard)
- R1 = with secondary air closed without grille
- R2 = with secondary air DBB
- R3 = with secondary air PA

06 - Colour

- 1 = black colour similar to RAL 9005
- 2 = white colour similar to RAL 9010 (standard)
- 3 = white colour similar to RAL 9016
- 4 = grey colour similar to RAL 9006

07 - Mounting kit

- M0 = without mounting kit (only if the device casing should be replaced)
- M1 = with mounting kit (standard)

ORDER CODE FOR ACCESSORIES SUPPLIED LOOSE

01	02
Type	Model
Example	
LWZ	-TR05

NOTE

Please always specify the complete order code in the order!

If details are missing from the order, the standard model will be delivered.

Any special model not included in the order code must be queried before ordering.

EXAMPLE

LWZ-TR05

Accessories for air-water systems | Room thermostat standalone with weekly program RDG160T

ORDER DETAILS

01 - Type

LWZ = accessories for air-water systems

02 - Model

Flexible hydraulic connection

Hxyz = with device connection (x), flexible connection (y) and free connection to the hydraulic network (z)
 (for x, y, z, see table on page 21)

Shut-off valve

VE01 = STH BOSTON 31038 1/2

Pressure-independent control valve

 V649 = VWG41.20-2.5-2.5, G 1
 V650 = VWG41.20-3.45-3.45, G 1

Valve adapter

- VA01 = ALG132, female thread G 1/2 to male thread R 3/8
VA02 = ALG142, female thread G 3/4 to male thread R 1/2

Thermal actuator

- AT01 = SAST127474, T, ON/OFF, 230 V AC
AT02 = SAST127475, T, ON/OFF, 24 V AC/DC
AT03 = SAPV127957, T, 0-10 V, 24 V AC, valve travel detection
AT04 = SAPV128561, T, 0-10 V, 24 V DC, valve travel detection
AT05 = SAPO129150, M, 0-10 V, 24 V AC/DC, valve travel detection, feedback signal

Motorised actuator

- AM01 = SMPV132351, T, 0-10 V, 24 V AC/DC, valve travel detection, feedback signal
AM02 = SMPO132353, M, 0-10 V, 24 V AC/DC, valve travel detection
AM03 = SMPO132352, M, 0-10 V, 24 V AC/DC, valve travel detection, feedback signal

6-way ball valve

- AR01 = GDB341.9E, 3P, 230 V AC
AR02 = GDB161.9E, 0-10 V, 24 V AC/DC
AR03 = GDB111.9E, KNX, 24 V AC

Room thermostat

- TR05 = RDG160T

Room thermostat with KNX interface

- TK02 = RDG160KN
TK04 = RDG260KN

Condensate pump

- KK01 = Si-10

Mounting kits

- MGV1 = mounting kit for device casing GV-AQS

Pipe sets

- RR11 = pipe set for 2-pipe register 1 pipe row left
RR12 = pipe set for 2-pipe register 1 pipe row right
RR31 = pipe set for 2-pipe register 3 pipe rows left
RR32 = pipe set for 2-pipe register 3 pipe rows right
RL41 = pipe set for 4-pipe register 1 and 3 pipe rows left
RL42 = pipe set for 4-pipe register 1 and 3 pipe rows right

SPECIFICATION TEXT

High-efficiency fan convector Aquaris Silent for horizontal or vertical installation in false ceilings, cavity floors, walls or free-standing/freely suspended with casing. The housing of the device consists of profiles and covers made of galvanised sheet steel and provided with polyethylene heat and sound insulation with a thickness of 6 mm. The energy-efficient EC motor fan consists of double-sided intake-operated centrifugal blower with direct drive. The 2-pipe or 4-pipe heat exchangers or registers have a rack made of galvanised steel, aluminium ribs and copper pipes. With condensate pan according to VDI 6022 made of stainless steel sheet. Filter efficiency ISO Coarse < 40%. It consists of synthetic fabric on a plastic frame.

Product: SCHAKO

length L = xxxx mm -xxxx

Fan convector position

fan convector centred -M
 fan convector offset to the right -R
 fan convector offset to the left -L

Insulation

without insulation -I0
 thermal insulation of 10 mm -I1

Air flow direction

intake straight -1

Air diffuser

with ceiling air diffuser DBB -D1
 with ventilation grille IB-Q -R1

Air diffuser colour

white similar to RAL 9010 -22
 colour of air diffuser xy according to table on page 19 -xy

Mounting

visible mounting -SM
 concealed mounting -VM

Primary air connection spigot

Without primary air connection spigot -P0

Primary air spigot diameter

Without primary air connection spigot -0

Device casing models

Type

device casing -GV

Family

for fan convector Aquaris Silent

-AQS

Size

Size 1 -1

Size 2 -2

Size 3 -3

Size 4 -4

Size 5 -5

Mounting

horizontal – ceiling -H
 vertical – wall -V

Secondary air grille

with secondary air open -R0
 with secondary air closed without grille -R1
 with secondary air DBB -R2
 with secondary air PA -R3

Colour

black colour similar to RAL 9005 -1
 white colour similar to RAL 9010 -2
 white colour similar to RAL 9016 -3
 grey colour similar to RAL 9006 -4

Mounting kit

with mounting kit -M0
 without mounting kit -M1

Models of accessories supplied loose

Flexible hydraulic connection

EDE-13 500 mm -1
 EDE-13 800 mm -2
 EDE-13 1200 mm -3
 AG male thread 1/2 -A
 AG male thread 3/4 -B
 ÜMF flat seal spigot nut 1/2 -C
 ÜMF flat seal spigot nut 3/4 -D
 R-AG-D rotating male thread 1/2 -E
 R-AG-D rotating male thread 3/4 -F

Shut-off valve

STH BOSTON 31038 1/2 -VE01

Pressure-independent control valve
